EXECUTIVE SUMMARY

This is the 21st annual Department of Defense report on social representation in the U.S. Military Services. The ensuing eight chapters and technical appendices provide data and commentary on demographic, educational, aptitude, and socioeconomic characteristics of applicants, new recruits, and enlisted and officer members of the Active and Reserve Components. This report covers fiscal year (FY) 1994, October 1, 1993 to September 30, 1994.

The FY 1994 end-strength of the Active Component was 1.58 million and the Selected Reserve (comprising the Army National Guard, Army Reserve, Naval Reserve, Marine Corps Reserve, Air National Guard, and Air Force Reserve) totaled 984,000. Today's force is much smaller than in the early volunteer force years, and even reduced in comparison to the size in the late 1980s; planned downsizing of the military is nearly complete. To sustain even this reduced strength, in FY 1994 just over 176,000 new non-prior service (NPS) recruits were enlisted and almost 16,000 newly commissioned officers reported for active duty. Furthermore, nearly 56,000 without and more than 98,000 with prior service experience were enlisted in the Selected Reserves. Close to 15,000 officers entered the National Guard or Reserves this past fiscal year as well. The salient characteristics of these personnel are described in this summary.

FY 1994 Highlights

Age. The active duty military comprises a younger workforce than the civilian sector. Service policies and legal restrictions account for the relative youthfulness of the military. Just over 90 percent of FY 1994 new active duty recruits were 18 through 24 years of age, in comparison to 34 percent of civilians within the military-age range of 17-35. Not quite half (44 percent) of the active duty enlisted force is 17-24 years old, in contrast to about 15 percent of the civilian labor force. Officers were older than those in the enlisted ranks (mean ages 34 and 27, respectively) but they too were younger than their civilian equivalents. For example, whereas 55 percent of active duty officers were younger than 35, only 34 percent of civilian college graduates could be so counted.

The data for enlisted personnel within the Selected Reserve similarly showed a more youthful composition than that of the civilian labor force. Among enlisted Reserve Component members, 65 percent of NPS accessions were between the ages of 17 and 19, whereas a scant 14 percent of 17-35 year-old civilians fell within this age subgroup. Of course, prior service Reserve Component enlisted accessions were older than those without prior service, but still younger than the civilian workforce (e.g., 68 percent versus 37 percent were under 30 years of age). Officers in the Selected Reserve proved the exception to this trend, with an age distribution more comparable to that of civilian college graduates 21 years of age and older and in the workforce.

Race/Ethnicity. As has been the case throughout the history of the all-volunteer force, in FY 1994 Blacks were amply represented in the military overall. Within the enlisted force, Blacks were overrepresented among NPS active duty accessions (18 percent) relative to the 18-24 year-old civilian population (14 percent). Hispanics, on the other hand, continued to be underrepresented, with 8 percent among NPS accessions compared with 13 percent for comparable civilians. Other

racial and ethnic minorities comprised 4 percent of accessions; nearly equal to the population proportion. Not only does active duty attract an overrepresentation of Blacks, but retention rates boosted their representation among Active Component enlisted members to 22 percent in contrast to the 12 percent of Blacks among 18-44 year-old civilians. With 6 percent of active duty enlisted members counted as Hispanic, this ethnic minority maintained its low proportion relative to the growing civilian count which is now at 11 percent.

Over the years, Blacks have been overrepresented, whereas Hispanics and "Other" minorities have been underrepresented. The proportion of active duty accessions with Hispanic and "Other" backgrounds has steadily increased during the past ten years (Hispanics: 3.7 percent in FY 1985 to 7.7 percent in FY 1994; "Other": 3.4 percent in FY 1985 to 3.7 percent in FY 1994). The Navy has generally recruited greater proportions of Hispanics. However, the Marine Corps has retained more Hispanics, as evidenced by larger percentages of Hispanic Marines in the enlisted force during the past nine years.

Minorities were not as populous among Active Component officers. About 8 percent of newly commissioned officers were Black, 3 percent were Hispanic, and 7 percent were "Other" minorities. Among new and "seasoned" active duty officers combined, the percentages were 7, 3, and 4, for the Black, Hispanic, and "Other" subgroups, respectively. Although Blacks comprised a much smaller proportion of officers than of enlistees, when viewed from the vantage point of college graduates in the civilian work force 21 years and older (which is 7 percent Black, 4 percent Hispanic, and 5 percent "Other"), minorities appear to be proportionately represented and not on the decline among the officer corps.

Racial/ethnic findings for the Reserve Component were similar. Blacks were overrepresented, Hispanics were underrepresented, and others were proportionally represented among NPS and particularly among prior service Selected Reserve accessions. As with the Active Component, the proportions of minorities among Selected Reserve officers were smaller than for enlisted personnel, but the percentages were not out of line with appropriate civilian college graduate minority percentages.

The FY 1994 *Population Representation* report is the first to examine warrant officers. When combined with commissioned officers, warrants account for 8 percent of active duty officer accessions (7 percent in the Selected Reserve) and 7 percent of the officer corps (9 percent in the Selected Reserve). Warrant officers are not represented in the Air Force. Warrant officers on active duty have greater minority representation than commissioned officers. Blacks, in particular, have higher representation among active warrant officers (11 percent warrants versus 7 percent commissioned officers). However, the same does not hold for Selected Reserve warrant officer accessions or officers; there are fewer minorities in the reserve warrant ranks as compared to commissioned officers. Minority warrants are underrepresented with respect to civilian college graduates.

Gender. Women comprised 16 percent of NPS active duty accessions and 19 percent of NPS accessions to the Selected Reserve (14 percent of the numerically larger prior service segment of Reserve Component accessions were women) compared to 50 percent of 18- to 24-year-old

civilians. Among the total groups of enlistees on active duty, 12 percent were women. Among comparable Selected Reservists, 14 percent were women. The representation of women among active duty officer accessions and within the officer corps was 19 and 14 percent, respectively. Similar percentages were seen among Selected Reserve officers (20 and 17 percent, respectively).

Though women constitute a much smaller proportion of the Total Force than men, their representation has grown greatly during the all-volunteer force. During this past year, with the opening of more jobs to women and gender-neutral recruiting in the Navy and Air Force, proportionally more women joined active duty (16 percent in FY 1994 compared to 14 percent in FY 1993 and 8 percent in FY 1974).

Marital Status/Dependency. In addition to the growing presence of women in the military, Servicemember marriage and parenthood have also been on the rise. During the last 20 years, the enlisted force has moved from a predominantly single, male establishment, to one with a greater emphasis on family. In FY 1974, approximately 43 percent of enlisted members were married. Today, a majority of soldiers, sailors, and airmen are married. Newcomers to the military are less likely than their civilian age counterparts to be married, but as time goes on military members come close to resembling the civilian sector in terms of marital status. Among enlisted members, 57 percent of those on active duty and 51 percent of the Reserve Component were married as of FY 1994. Of those married and on active duty, 11 percent were part of dual-military marriages. Men were more likely to be married than women in the military, but women were more likely to be a partner in a dual-military marriage.

As one might expect, officers were more likely to be married (73 percent of Active and Reserve Component) than enlisted personnel, owing to their being older and financially more secure on average. Dual marriages accounted for 7 percent of married active duty officers. Again, women officers were less likely than men to be married but, if married, they were more likely to be in a dual-military relationship.

Education Level. The Military Services value and support the education of their members. The emphasis on education was evident in the data for FY 1994. Practically all active duty and Selected Reserve enlisted accessions had a high school diploma or equivalent (i.e., Tiers 1 and 2, 99 percent each), well above civilian youth proportions (80 percent of 18-24 year-olds). More important, for reasons related to term completion, 96 percent of active duty and 90 percent of Selected Reserve enlisted accessions held a regular high school diploma or could otherwise be categorized in the preferred "Tier 1" education category.

Given that officers are required to possess at least a baccalaureate college degree upon or soon after commissioning and that a college education is part of the main commissioning sources (i.e., military academies and ROTC), the academic standing of officers is not surprising. The fact that 98 and 99 percent among active duty officer accessions and officer corps, respectively, were degree holders (11 and 42 percent advanced degrees) is in keeping with policy and the professional status and expectations of officers. Likewise, 85 percent of Reserve Component officer accessions and 87 percent of the total Reserve Component officer corps held at least a B.S. or B.A. degree, with 25 and 30 percent advanced degrees, respectively.

Armed Forces Qualification Test (AFQT) Scores. Levels of cognitive aptitude as measured by scores on the military's enlistment screening test--AFQT--were higher among enlisted military members than among the civilian youth population. Approximately 72 percent of NPS active duty enlisted accessions scored within the top half (Categories I-III A) of the nationally normed AFQT distribution. Less than 1 percent scored in the lowest acceptable AFQT Category IV, which encompasses the 10th through 30th percentiles relative to the 1980 national youth population. Reservists also topped their civilian counterparts with 60 percent of NPS accessions scoring within AFQT Categories I-III A and less than 2 percent in Category IV.

Test score data were not reported for officers because of test variation by Service and commissioning source. Tough entry requirements (e.g., SAT scores) for the commissioning sources as well as the college degree hurdle ensure quality among officers.

High-Quality Recruits. Level of education together with AFQT score are used as a predictive index of quality, encompassing persistence and training and job performance, within the enlisted ranks. Because high school diploma graduates are more likely to complete their contracted enlistment terms and higher AFQT-scoring recruits are expected to perform better in training and on the job, the Services strive to enlist AFQT Category I-III A high school diploma graduates. In FY 1994, 66 percent of NPS active duty recruits were so-called "high quality."

Reading Ability. Like aptitude levels, reading levels were higher in the enlisted military than in the non-military sector. FY 1994 NPS active duty enlisted accessions had a mean reading level typical of an 11th grade student whereas the mean for civilian youth was within the 10th grade range.

Socioeconomic Status. Socioeconomic representation in the volunteer force is one of the centerpoints of interest. Because of continuing concerns that our nation's defense would fall disproportionately on the poor and the underclass, DoD sought an empirical assessment rather than relying on mere impressions and anecdotes. Beginning in March 1989, the Survey of Recruit Socioeconomic Backgrounds has been conducted annually among active duty enlisted accessions. Based on a summary of parents' education, employment status, occupation, and home ownership, FY 1994 data showed that both active and reserve recruits are primarily from low and middle-class families. The high end of the distribution was not as well represented among the backgrounds of new recruits as in census data on parents of civilian youth ages 14 through 21.

Geographic Representation. The geographic distribution of enlisted active accessions for FY 1994 shows that the South, and in particular the West South Central and South Atlantic Divisions of this region, continued to have the greatest representation. Around one-third of NPS accessions hailed from this region. In fact, the South was the only region to be slightly overrepresented among enlisted accessions compared to its proportion of 18-24 year-olds. The representation ratio (percentage of accessions divided by percentage of 18-24 year-olds from the region) for NPS active accessions from the South was 1.2, compared to 0.8 and 0.9 for the other regions.

Representation Within Occupations. The Services need a steady supply of military-specific combat and combat support personnel. They rely heavily on infantrymen and guncrew specialists. Still, in addition the Services require technicians, mechanics, health care, and other support personnel. Assignment to and training in one of the military's many occupational specialties, which carry varying cognitive and noncognitive demands, is part of the enlistment or commissioning package. As of FY 1994, less than one-third of active duty enlisted personnel were in occupations such as infantry, craftsmen, and service and supply handling that require relatively lower AFQT levels. A plurality of enlisted members (43 percent) served in mid-level skill jobs within the medical and dental, functional support and administration, and electrical/mechanical equipment repair areas. The remainder (22 percent) were in high-skill areas including electronic equipment repair, communications and intelligence, and other allied specialists. Military enlisted women were overrepresented in the traditionally female areas of functional support and administration (41 percent) and medical/dental (18 percent).

In FY 1994, the proportions of Blacks and Whites were similar in five of the nine occupational areas -- infantry, communications and intelligence specialists, medical and dental specialists, other allied specialists, and craftsmen. In two areas -- electronic equipment repair and electrical/mechanical equipment repair -- the proportions of Whites were higher. Blacks were still more heavily represented in the functional support and administration and service and supply areas.

Most active duty officers serve in tactical operations (39 percent) with health care and engineering and maintenance distant seconds and thirds, respectively (19 percent and 12 percent). Assignment patterns differed between men and women. Greater percentages of men were in tactical operations (e.g., fighter pilots, combat commanders), whereas greater percentages of women were in health care and administration. In FY 1994, racial and ethnic groups of officers generally had similar assignment patterns across occupational areas although there was a lower percentage of Blacks in tactical operations and a greater percentage of Blacks in administration and supply areas.

The occupational distributions among Active and Reserve Components vary somewhat reflecting the different missions. For example, as of FY 1994, 17 percent of the enlisted Active Component were in infantry and related occupations in contrast to 24 percent of enlisted Selected Reserves. The Reserve Component is somewhat "lighter" in technical occupational areas such as electronic equipment and electrical/mechanical equipment repair. There were also some occupational differences between Active and Reserve officers; the Reserve Component had a smaller proportion in tactical operations but a greater proportion in health care.

Conclusions

Deviations from population proportions as documented in this report are not necessarily a cause for concern. Among the factors impinging upon representation are the military aptitude and education standards and goals that reduce the likelihood of distributions that mirror the civilian population. Regardless of whether representation is a realistic goal, monitoring the composition of the total force is important. Tracking demographic and background characteristic trends has useful policy implications. In addition to documenting Defense's commitment to diversity, charting the characteristics of military members can help the Services to formulate policies that enhance the

recruitment, training, satisfaction, retention, and preparation of their personnel. This summary of the FY 1994 population representation report is but a short synopsis of the more detailed and complex information and interpretations contained in the larger document.

Chapter 1

INTRODUCTION

This is the 21st annual Department of Defense (DoD) report on social representation in the U.S. Military Services. Such a profile of the social demography of the military was initiated in response to a mandate by the Senate Committee on Armed Services (Report 93-884, May 1974). Since fiscal year (FY) 1975, the Directorate for Accession Policy, Office of the Assistant Secretary of Defense (Force Management Policy) has provided annual data addressing the quality and representativeness of enlisted accessions and personnel compared to the civilian population. Furthermore, over the years Accession Policy has expanded its report to include statistics not only for active duty enlisted personnel but for officers and reservists as well. These data are invaluable to military personnel policy makers and analysts as well as to those interested in, but relatively unfamiliar with, the qualities and characteristics of the people serving in the Military Services.

The forces have been staffed exclusively with volunteers for more than 20 consecutive years. Over 10 years ago, then-Secretary of Defense Caspar Weinberger declared that the volunteer force was no longer to be considered an experiment. However, despite the modern military's experience and success with volunteer recruitment, misperceptions of the sociodemographic characteristics of military personnel remain, as does skepticism regarding their quality.

Critics have argued that a peacetime force may be depicted as idle, irresponsible, and unmotivated.¹ An infamous quote from the popular press had it that "the very poor, the ill-educated, the hapless, the hopeless, and by some accounts, the incompetent are paid to do the defending the rest of us are loath to do."² Richard M. Nixon, the president credited with ending the draft, stated years later (in 1980) that "the volunteer army has failed to provide enough personnel of the caliber we need for our highly sophisticated armaments."³

Such mistaken impressions have persisted beyond the volatile early years of the modern volunteer military. Although the purportedly "hollow" force of the 1970s was transformed into a heralded force of the 1980s and beyond, negative notions have remained. In 1987, for example, Eugene McCarthy declared that "[t]he Department of Defense has not been able to attract enough capable and qualified persons. . . ." Further he claimed that "our armed forces are far from a

² Cohen, R., "Draft," *The Washington Post* (July 28, 1981), p. B-1 as quoted in M.J. Eitelberg, *Military Representation: Reflections and Random Observations*, paper presented at the Biennial Conference of the Inter-University Seminar on Armed Forces and Society, Baltimore, MD, October 1989.

³ Nixon, R.M., *Contributions in Political Science*, No. 312 (Westport, CT: Greenwood Press, 1993), p. 78 as quoted in M.J. Eitelberg, *The All-Volunteer Force after Twenty Years*, paper presented at "A Military of Volunteers: Yesterday, Today, and Tomorrow," a conference commemorating the 20th anniversary of the All-Volunteer Force, U.S. Naval Academy, Annapolis, MD, September 15-17, 1993.

cross-section of the U.S. population; our military is unrepresentative of the nation."⁴ According to a 1990 survey of employers conducted by the Army, employers have "inaccurate perceptions about the educational level, the skills and abilities possessed by veterans, and in general, the experience, opportunities, and credentials of veterans."⁵

Certainly, there have been obstacles to overcome and setbacks along the way to building and maintaining a quality force. However, for at least a decade the statistics have been radiant and data from the annual *Population Representation* report and other sources clearly counter the pessimistic viewpoints. Regarding the social composition of military personnel, experts profess that a perfectly representative force, or even a close approximation thereof, is an illusory goal. Institutional and self-selection factors prevent the military from duplicating civilian society in terms of age, gender, race/ethnicity, educational, aptitude, and socioeconomic distributions. Nevertheless, there is diversity within the Army, Navy, Marine Corps, and Air Force and, what's more, recruiting and deployment exigencies have been met.

Continuing scrutiny of and disagreements regarding appropriate quality and representation levels of the force are to be expected and may signify a healthy interest in military personnel. It is perhaps if and when the characteristics of military personnel are taken for granted or ignored to the point of organizational irrelevance that we should be concerned. However, the *Population Representation* report can dispel wild rumors, myths, and mistaken impressions regarding military personnel through its facts on the demographic, educational, aptitude, and socioeconomic levels of applicants, new recruits, and enlisted and officer members of the present-day Active Forces and Reserve Components. The chapters which follow provide a narrative description with selected tables and graphs, as well as a detailed set of technical appendices addressing many of the traits and characteristics of current military personnel.

Fiscal Year 1994: The Drawdown Draws Down

Given that a large peacetime force was fostered in response to the Cold War, it is fitting that the end of the Cold War ushered in a drawdown of forces. The drawdown is nearing completion. As shown in Figure 1.1, beginning next fiscal year, accession requirements will inch up, albeit slightly, with the completion of the drawdown. At the same time, the number of male youth is expected to continue to recover from the depths of the youth population recession.

Despite the drawdown's reduced requirements and the upswing in the prime recruiting market, there remains cause for concern--though certainly not panic--with regard to recruiting. The inclination for youth to consider military enlistment or so-called "propensity" is declining. This phenomenon is particularly apparent among Blacks. Among 16-21 year-old men, active propensity has slipped by seven percentage points from pre-drawdown levels. Propensity has

⁴ McCarthy, E., *Required Reading* (New York: Harcourt Brace Jovanovich, 1988) as quoted in M.J. Eitelberg, *Military Representation: Reflections and Random Observations*, paper presented at the Biennial Conference of the Inter-University Seminar on Armed Forces and Society, Baltimore, MD, October 1989.

⁵ See Schroyer, C.J., Hansen, L.A., Lerro, P.A., and Benedict, M.E., *Analysis of the 1990 Survey of Employers* (Alexandria, VA: U.S. Army Research Institute for the Behavioral and Social Sciences, 1990).

Figure 1.1. The population of 18-year-old males and the Services' non-prior service (NPS) recruiting requirements for years 1950-2010 (projected).

declined by 22 points among young Black men during this same period.⁶ "Appropriate" minority representation levels continue to be controversial, but, regardless of one's position on the benefits and burdens of service and the corresponding interpretation of Black participation rates as being too low or too high, declining propensity is disturbing because it suggests a reversal of Black youth's high regard for the profession of arms. Studies are now underway to determine the contributing factors associated with enlistment's loss of luster.

In addition to recruiting concerns, retention warrants consideration in the face of the actual and perceived erosion of benefits. Representatives of the personnel and leadership development communities suggest that retirement and other forms of compensation are particularly salient

⁶ Memorandum from F. Pang, Assistant Secretary of Defense (Force Management Policy), Subject: 1994 Youth Attitude Tracking Study, February 22, 1995.

issues for the continued satisfaction and retention of officers.⁷ In a smaller military it is important to avoid being cavalier about the attainment of quality. The key to quality in the career force is twofold: 1) the continued recruitment of quality personnel and 2) commitment to quality of life. After all, equity is not just the achievement of particular population proportions but involves providing for soldiers, sailors, marines, and airmen, regardless of their individual traits, who have chosen to serve their country.

The Total Force and its Missions

In FY 1994, end-strength of the Active Component (AC) was further reduced by 5 percent below last year's strength to 1.58 million. Although the active force is down by 20 percent from FY 1991 levels (1.91 million), the pace of reduction has slowed. The end-strength of the Selected Reserve (comprising the Army National Guard, Army Reserve, Naval Reserve, Air National Guard, Air Force Reserve, and Marine Corps Reserve) did not top one million in FY 1994, but stood at 984,000 members--representing a reduction on the order of 15 percent from 1991 levels of 1.15 million.

As the trimming of the force continued in FY 1994, so too did accession requirements. Approximately 176,000 new recruits (non-prior service accessions) and almost 16,000 officers were added to the active duty enlisted and commissioned forces, respectively. There were numerous newcomers to the Selected Reserves as well--over 154,000 enlisted (just over 98,000 or about 64 percent had prior service experience) and almost 15,000 officers.

Despite the end of the Cold War, defense remains a risky business. What's more, the leaner forces, who willingly choose to serve, are far from idle. Today's forces, both active and reserve, are exposed to an increasingly quick and stressful operating and personnel tempo (OPTEMPO & PERSTEMPO). They train for and participate in war and other-than-war related missions to combat hostile regional powers, the proliferation of weapons of mass destruction, the ravages of ethnic conflicts, terrorism, and the illegal drug trade, and to promote peace, humanitarian assistance, and disaster relief.

A Preview of the Portrait of the Force

Defense missions are conducted by an increasingly diverse force. Minorities remain steadfast participants. In the face of declining propensity and of concerns that a smaller force would have a disproportionate toll on Black enlistment and retention rates, there remains an overrepresentation of Blacks, but not other minorities (e.g., Hispanics, Asian Americans, and Native Americans). Volunteers are not drawn excessively from those of lower socioeconomic backgrounds; rather, the middle class is amply represented. The college-educated are represented in the officer corps. Furthermore, recruits come from all across America and not just from rural areas and the South, though these regions are more highly represented.

⁷ See McCloy, R.A., Laurence, J.H., and DiFazio, A.S., *Monitoring the Attitudes and Perceptions of Junior Officers: The Longitudinal Research on Officer Careers (LROC) Survey* (Alexandria, VA: Human Resources Research Organization, July 1995).

Certainly, there remains an emphasis on youth--young men in particular. However, women are an increasing presence with more central roles. For example, FY 1994 found women piloting the Air Force's F-15s and landing aboard a Navy carrier--the USS Eisenhower. In fact, 400 women were aboard the 5,000 member crew of the Eisenhower during its FY 1994 deployment off the coast of Haiti. Participating in direct ground combat remains an obstacle for women in the military but along with the Navy and Air Force, the Army and Marine Corps have removed unnecessary barriers for example, by providing opportunities for women in field artillery and air defense artillery.

With the greater presence of women and higher retention rates among military personnel in general, has come the increase in military families. More and more Servicemembers are married (including dual-military marriages) with children. Thus, spouses and children share the burdens of service life. The family ties of military personnel present challenges to readiness but promote integration with the civilian population.

As you will see from this report, despite the stubborn misperceptions and in the face of declining propensity figures, military personnel not only are diverse but have impressive quality characteristics as well. Clearly, FY 1994 was another quality year as measured by both Armed Forces Qualification Test (AFQT) scores (mean = 61st percentile and 72 percent scoring within the top half of the national distribution) and the proportion of high school diploma graduates among incoming recruits (96 percent). Quality was similarly high among non-prior service Selected Reserve enlisted accessions (i.e., 60 percent scoring at or above average in aptitude and 91 percent high school diploma graduates). These figures are well above the levels found in the 18- to 24-year-old youth population and in excess of the quality requirements projected in 1985.⁸ Such banner statistics are miraculous in the face of decreased propensity, changing demographics, and less than stellar standardized test score performance on the part of the nation's youth.⁹

Data Sources

This report contains data from a number of sources, as listed below. The computerized data files on military personnel are maintained by the Defense Manpower Data Center (DMDC). The Bureau of Labor Statistics (BLS) provides the bulk of the comparison data on the national population. Though the data sources have remained consistent, there have been subtle changes in the nature of the civilian comparisons. Previously, Census data were captured as of September--the last month of the fiscal year in question. To provide a more accurate comparison for military *applicant and accession* data, the average across the months in the entire fiscal year is used instead.

⁸ Department of Defense, *Defense Manpower Quality, Volume 1* (Washington, DC: Office of the Assistant Secretary of Defense [Manpower, Installations, and Logistics], May 1985).

⁹ See Kageff, L.L. and Laurence, J.H., "Test Score Trends and the Recruit Quality Queue," in M. J. Eitelberg and S.L. Mehay (Eds.), *Marching Toward the 21st Century* (New York: Greenwood, 1994), pp. 81-96.

Age comparisons for the Selected Reserves have been adjusted as well. Previously, the 18-44 year-old civilian labor force served as the benchmark for prior-service enlisted *accessions*. Beginning this year, there is a more appropriate base population, that of the 20-39 year-old civilian labor force. Selected Reserve enlisted members are compared to 18-49 year-old civilians instead of 18- to 44-year-olds.

Chapter 2

ACTIVE COMPONENT ENLISTED APPLICANTS AND ACCESSIONS

Despite ongoing force reductions, the Services are one of the largest employers in the United States. Approximately 176,000 young men and women enlisted in the Active Components in FY 1994. Recruiting a quality force is as important as ever, perhaps more important given the smaller number of men and women in the military and the increasing sophistication of weapons and methods for fighting "modern" wars. Also, the Services' missions are changing to include peacekeeping and humanitarian efforts, requiring additional skills from today's men and women in uniform.

Military recruiting is increasingly difficult. With the personnel drawdown frequently reported in the media, some youth have the mistaken perception that the military is not recruiting.¹ In addition, for the past five years, youth interest in military service has declined. Data from the annual Youth Attitude Tracking Study show a decrease in propensity to enlist among young men (16- to 21-year-olds) from a peak of 34 percent in 1991 to 29 percent in 1993 to 26 percent in 1994.² Among 16- to 21-year-old Black males, the decline is even greater, from 49 percent in 1991 to 37 percent in 1993 to 32 percent in 1994.³ Also, the increasing number of high school graduates attending college limits the supply of high-quality applicants to the Services. About 62 percent of today's high schoolers enroll in college in the fall after graduation, compared to about half of high school graduates a decade ago.⁴ In spite of decreasing propensity and competition with colleges and universities, military recruiters were able to enlist a high-quality accession cohort in FY 1994.⁵ This chapter presents an introduction to the Active Component enlistment process, followed by demographic characteristics of enlisted applicants and new recruits (non-prior service accessions).

The Recruiting Process

Initial contacts between military recruiters and youth interested in military service are exploratory. In most cases, youth seek information from recruiters in more than one Service. Once they select a Service and take the Armed Services Vocational Aptitude Battery (ASVAB), youth may wait before deciding to proceed with enlistment processing.

In addition to providing information to the prospective enlistee, recruiters determine an applicant's eligibility for military service. Questions are asked regarding age, citizenship, education,

⁴ U.S. Department of Education, *High School Students Ten Years After "A Nation at Risk": Findings from the Condition of Education 1994* (NCES 95-764) (Washington, DC: National Center for Education Statistics, 1995), p. 10.

⁵ News release from the Office of the Secretary of Defense (Public Affairs), *Military Personnel Recruiting Results for the Active Components Fiscal Year 1994*, November 3, 1994.

involvement with the law, use of drugs, and physical and medical conditions that could preclude enlistment. Most prospects take an aptitude screening test at a recruiting office. Estimates are that 10 to 20 percent of prospects do not continue beyond this point.⁶

The Armed Services Vocational Aptitude Battery. Prospects who meet initial qualifications take the ASVAB, the first formal step in the process of applying to enlist in the Armed Forces. The ASVAB is a battery of tests used by DoD to determine enlistment eligibility and qualifications for military occupations. It consists of 10 tests, four of which comprise the Armed Forces Qualification Test (AFQT): Arithmetic Reasoning, Mathematics Knowledge, Word Knowledge, and Paragraph Comprehension. The AFQT, a general measure of trainability and on-the-job performance, is the primary index of recruit aptitude.

AFQT scores, expressed on a percentile scale, reflect an applicant's standing relative to the national population of men and women 18 to 23 years of age.⁷ The scores are grouped into five categories based on the percentile score ranges shown in Table 2.1. Persons who score in Categories I and II tend to be above average in trainability; those in Category III, average; those in Category IV, below average; and those in Category V, markedly below average. By law, Category V applicants and those in Category IV who have not graduated from high school are not eligible for enlistment. Over and above these legal restrictions, each Service prescribes its own aptitude and education criteria for eligibility. Each Service uses combinations of ASVAB test scores to determine an applicant's aptitude and eligibility for different military occupations.

Educational credentials. DoD implemented a three-tier classification of education credentials in 1987. The system was developed after research indicated a strong relationship between education credentials and successful completion of the first term of military service.⁸ The three tiers are:

- Tier 1. Regular high school graduates, adult diploma holders, and non-graduates with at least 15 hours of college credit.
- Tier 2. Alternative credential holders, including those with a General Educational Development (GED) certificate of high school equivalency.
- Tier 3. Those with no education credentials.

⁶ Waters, B.K., Laurence, J.H., and Camara, W.J., *Personnel Enlistment and Classification Procedures in the U. S. Military* (Washington, DC: National Academy Press, 1987), p. 12.

⁷ The score scale is based on a 1980 study, the Profile of American Youth, conducted by DoD in cooperation with the Department of Labor (DoL). Participants were drawn from a nationally representative sample of young men and women selected for an ongoing DoL study, the National Longitudinal Survey of Youth Labor Force Behavior.

⁸ See Flyer, E.S., *Factors Relating to Discharge for Unsuitability Among 1956 Airman Accessions to the Air Force* (Lackland AFB, TX: Personnel Research Laboratory, December 1959); and Elster, R.E. and Flyer, E.S., *A Study of the Relationship Between Educational Credentials and Military Performance Criteria* (Monterey, CA: Naval Postgraduate School, July 1981).

Table 2.1. Armed Forces Qualification Test (AFQT) Categories and Corresponding Percentile Score Ranges	
AFQT Category	Percentile Score Range
I	93-99
II	65-92
IIIA	50-64
IIIB	31-49
IV	10-30
V	1-9

Generally, the Services have different standards for individuals in each tier. Typically, Tier 3 applicants must have higher AFQT test scores than Tier 2 applicants, who must have higher test scores than Tier 1 individuals. The Air Force and Marine Corps follow these differential standards, requiring different minimum test scores for each tier. The other Services apply the standards slightly differently. The Army and Navy require applicants with alternative credentials (Tier 2) and those with no credentials (Tier 3) to meet the same AFQT standards, which are more stringent than those for high school graduates (Tier 1).

Physical examination. If an applicant achieves qualifying ASVAB scores and wants to continue the process, he or she is scheduled for a physical examination and background review at a Military Entrance Processing Station (MEPS). The examination assesses physical fitness for military service. It includes measurement of blood pressure, pulse, visual acuity, and hearing; blood testing and urinalysis; drug and HIV testing; and medical history. Some Services also require tests of strength and endurance. If a correctable or temporary medical problem is detected, the applicant may be required to get treatment before proceeding.

Moral character standards. Each applicant must meet rigorous moral character standards. In addition to the initial screening by the recruiter, an interview covering each applicant's background is conducted at the MEPS. For each individual, a computerized search for a criminal record is conducted. Some types of criminal activity are clearly disqualifying; other cases require a waiver, wherein the Service examines the applicant's circumstances and makes an individual determination of qualification.

Occupational area counseling. If the applicant's ASVAB scores, educational credentials, physical fitness, and moral character qualify for entry, he or she meets with a Service classification counselor at the MEPS to discuss options for enlistment. Up to this point, the applicant has made no commitment. The counselor has the record of the applicant's qualifications and computerized information on available Service training/skill openings, schedules, and enlistment incentives.

A recruit can sign up for a specific skill or for a broad occupational area (such as the mechanical or electronics areas). In the Army, all recruits enter for specific skill training. Approximately half of Air Force recruits enter for a specific skill, while the rest sign up for an occupational area and are classified into a specific skill while in basic training. In the Navy, approximately 55 percent of recruits enlist for a specific skill, while the rest go directly to the fleet after basic training, classified in airman, fireman, or seaman programs. Approximately 75 percent of Marine Corps enlistees enter with a guaranteed occupational area and are assigned a specific skill within that area after recruit training. The rest enlist either with a specific job guarantee (13 percent) or assignment to a job after recruit training (12 percent).

Normally an applicant will be shown a number of available positions. In general, the higher the individual's test scores, the more choices he or she will have. While the process differs by Service, the specific skills and occupational groupings are arranged similarly to an airline reservation system, with the "seat" and time of travel (to recruit training) based upon either school or field unit position openings. The counselor discusses the applicant's interests and explains what the Service has to offer. The counselor may suggest incentives to encourage the applicant to choose hard-to-fill occupational specialties. The applicant, however, is free to accept or reject the offer.

Many applicants do not decide immediately, but take time to discuss options with family and friends; others decide not to enlist. A review of the enlistment decision process indicates that the military continues to compete with civilian employment and educational opportunities even after the application stage of the enlistment process.⁹

The delayed entry program (DEP). When the applicant accepts an offer, he or she signs an enlistment contract. Only a small proportion are sent to a recruit training center from the MEPS within a month of their enlistment. Most enter the delayed entry program (DEP), which allows up to a year before the individual reports for duty. The DEP controls recruit flow into training "seats" at technical schools. The average time in the DEP is approximately four months.

Individuals in their senior year of high school enlist in the DEP with a reporting date after graduation; their enlistment contract is contingent upon successfully completing high school. Not all DEP enlistees actually enter active duty; some change their minds and ask to be released from their enlistment contracts. The Services consider enlistment in the DEP a serious commitment, but they do not require youth to enter military service against their will during peacetime.

Characteristics of Active Component Non-Prior Service Applicants

In FY 1994, more than 315,000 individuals applied to serve in the active enlisted military force (Appendix Table A-1). The distribution of FY 1994 Active Component non-prior service (NPS) applicants by race/ethnicity and gender is shown in Table 2.2.

⁹ Orvis, B.R. and Gahart, M.T., *Enlistment Among Applicants for Military Service: Determinants and Incentives* (Santa Monica, CA: RAND Corporation, 1990), p. vii.

Female	23.1	22.6	7.6	31.3	21.8
Columns may not add to total due to rounding. Also see Appendix Tables A-3 (Race/Ethnicity by Service and Gender) and A-4 (Ethnicity by Service).					

Seventy-eight percent are male, of whom 68 percent are White, 19 percent Black, 9 percent Hispanic, and 4 percent "Other." For female applicants, 58 percent are White, 30 percent Black, 8 percent Hispanic, and 5 percent "Other."¹⁰ Additional statistics on applicant characteristics (e.g., age, education levels, AFQT score, and marital status, by gender and race/ethnicity) are contained in Appendix A, Tables A-1 through A-8.

Characteristics of Active Component Non-Prior Service Accessions

During FY 1994, 176,409 Active Component non-prior service recruits (individuals who had not previously served in the military) shipped to recruit training centers. This does not include individuals who entered the DEP in FY 1994 but had not been sent to basic training by September

¹⁰ "Other" refers to other-than-Black non-Hispanic racial minorities such as American Indians, Asians and Pacific Islanders, and Native Alaskans.

30, 1994, nor does it include Reserve Component recruits (see Chapter 5 for Reserve Component enlisted accession data). This section examines a number of sociodemographic characteristics of FY 1994 NPS recruits, and compares them with the 18- to 24-year-old civilian non-institutionalized U.S. population.

The proportion of accessions-to-applicants over FYs 1981-1994 is tracked in Figure 2.1. In the earlier years, recruiters sent far more applicants to MEPSs for processing to achieve recruiting objectives. In FY 1981, over 800,000 applicants were processed through MEPSs to access approximately 302,000 new recruits, a 38 percent accession-to-applicant ratio. In the early 1980s, the Services implemented a series of management initiatives designed to emphasize quality and reduce overhead costs. Recruiting management objectives and award systems were changed to emphasize types of applicants (e.g., high school diploma graduates, Category IIIA and higher) in contrast to achieving purely numerical goals; enlistment screening tests were devised to estimate ASVAB performance prior to sending an individual to a test site.

Figure 2.1. Number of accessions and applicants with ratio of accessions-to-applicants, FYs 1981-1994.

Over the last decade, recruiters have expended great effort in screening prospects. For most years, progressively fewer prospects were sent to MEPSs. In FY 1994, approximately 315,000 applicants were processed through MEPSs to access 176,000 new recruits, a 56 percent ratio of accessions-to-applicants.

Age. By law, Active Component recruits must be between 17 and 35 years old; 17-year-olds must have parental permission to enlist.¹¹ Within the 17- to 35-year age range, the Services have different age ceilings. The Army and Navy accept applicants up to ages 34 and 35, respectively; the Air Force and Marine Corps age limits are 27 and 28, respectively.

The age distribution of FY 1994 active duty accessions is shown in Table 2.3. Ninety-one percent of new recruits are 18- to 24-year-olds, compared to about 34 percent of the comparable civilian population. The Marine Corps enlists the greatest percentage of 17- and 18-year-old recruits (46 percent) and the smallest percentage of those over age 21 (9 percent). The Army has the greatest proportion of recruits older than age 21 (25 percent) and the smallest proportion of 17- and 18-year-old recruits (30 percent).

Table 2.3. Age of FY 1994 Active Component NPS Accessions, by Service, and Civilians 17-35 Years Old (Percent)							
Age	Army	Navy	Marine Corps	Air Force	DoD	17-35 Year-Old Civilians	Accessions per 1,000 Civilians
17	3.5	3.9	4.7	3.0	3.7	4.8	1.9
18	26.5	33.8	40.8	32.9	32.3	4.6	16.5

Columns may not add to total due to rounding. Also see Appendix Table B-1 (Age by Service and Gender). Source: Civilian data from Bureau of Labor Statistics Current Population Survey File, October 1993 - September 1994.							

The right-hand column of Table 2.3 shows the rate at which civilian youth in each age group enlisted in the Armed Services in FY 1994. For example, 16.5 of every 1,000 18-year-olds and 1.1 of every 1,000 24-year-olds enlisted in FY 1994.

Race/ethnicity. There are significant racial/ethnic differences among the Services, as shown in Table 2.4. Nearly 33 percent of Army accessions are minorities, as compared to 30 percent Navy

¹¹ 10 U.S.C. 505.

recruits, 27 percent Marine Corps recruits, and 23 percent Air Force recruits. The Services recruited a greater proportion of minorities in FY 1994 (29 percent) compared to FY 1993 (28 percent).

Columns may not add to total due to rounding. Also see Appendix Tables B-3 (Race/Ethnicity by Service and Gender), and B-4 (Ethnicity by Service). Source: Civilian data from Bureau of Labor Statistics Current Population Survey File, October 1993 - September 1994.						

Figure 2.2 illustrates the race/ethnicity distribution of enlisted accessions for the 22-year period, FYs 1973 to 1994.¹² The percentage of minority enlisted accessions increased, with some fluctuations, during the years following the end of conscription. The number of Black accessions peaked in FY 1979. Hispanic accessions also peaked in FY 1979 (ignoring aberrant data for FY 1976). Accessions of "Other" races, a very small proportion of new recruits, have generally shown a gradual increase from 1 percent in FY 1973 to 4 percent in FY 1994. The increase of minorities coincided with a miscalibration of the ASVAB, and the consequent drop in aptitude of accessions beginning in January 1976. The miscalibration led to erroneous enlistment of many low-scoring applicants. Thus, representation of minorities, particularly Blacks (whose test scores are generally lower than those of Whites), increased during the miscalibration period. The error was corrected by September 1980.¹³

Figure 2.2. Race/ethnicity of Active Component NPS accessions, FYs 1973-1994.

Revised AFQT and education standards in the early 1980s limited the high minority representation levels of the late 1970s.¹⁴ By FY 1983, the proportion of Black recruits had returned

¹² See Appendix Tables D-4 (White accessions), D-5 (Black accessions), D-6 (Hispanic accessions), and D-7 ("Other" accessions) by Service and fiscal year.

¹³ Office of the Assistant Secretary of Defense (Manpower, Reserve Affairs, and Logistics), *A Report to the House Committee on Armed Services: Aptitude Testing of Recruits* (Washington, DC, 1980).

¹⁴ Congressional Budget Office, *Social Representation in the U. S. Military* (Washington, DC, 1989), p. 54.

to approximately the same level as before the test scoring error. By the mid-1980s, a gradual increase had resumed. Not until FY 1987 did Hispanic recruit-levels return to FY 1975 proportions. Lower high school graduation rates among Hispanics, compared to Whites and Blacks, confound the recruitment of qualified Hispanic applicants.¹⁵ The Services have accessed a greater proportion of Hispanics each year since FY 1985, when only 3 percent of enlistees were Hispanic. Today, nearly 8 percent of enlistees are Hispanic.

Blacks. In FY 1994, Blacks comprised nearly 18 percent of enlisted recruits, approximately 4 percentage points more than in the civilian population (14 percent). The Army continues to have the highest percentage of Black accessions, 22 percent in FY 1994. In the aftermath of Operations Desert Shield/Storm and in the midst of the drawdown (FY 1991), there were lower proportions of Black recruits than in previous years. FYs 1992 to 1994 have shown slight increases each year toward pre-drawdown levels of 21 percent Black accessions. However, the factors that contributed to the FY 1991 decrease -- including the closing of offices in less productive recruiting areas, the relocation of recruiters to more promising markets consistent with shifting demographic patterns, and a decreasing propensity among Black youth toward enlisting -- continue to affect Black enlistment rates.¹⁶

While Black men comprise 16 percent of DoD male recruits, Black women make up 27 percent of female recruits (Table 2-4 and Appendix Table B-3). Black women in FY 1994 comprised 36 percent of Army female recruits, 24 percent of Navy female recruits, 18 percent of Marine Corps female recruits, and 19 percent of Air Force female recruits.

Hispanics. Hispanics were underrepresented among enlisted accessions in FY 1994, slightly less than 8 percent of recruits compared to 13 percent of civilian 18- to 24-year-olds. The Marine Corps had the highest proportion of Hispanic accessions (11 percent) in FY 1994, followed by the Navy, Army, and Air Force (8, 7, and 5 percent, respectively).

The proportion of Hispanic accessions has steadily increased over the years (Appendix Table D-6). In FY 1983, less than 4 percent of new recruits were Hispanic. Today, nearly 8 percent of enlisted accessions are Hispanic. One factor influencing the representation of Hispanics in the military is high school graduation rates.¹⁷ Although Hispanics have a lower proportion of high school graduates than other racial/ethnic groups, the graduation rates for this ethnic group have been on the rise. In FY 1992, 57 percent of 18- to 24-year-old Hispanics completed high school compared to 77 percent of Blacks and 88 percent of Whites.

¹⁵ See U.S. Department of Education, *The Condition of Education 1993* (NCES 93-290) (Washington, DC: National Center for Education Statistics, 1993), p. 61.

¹⁶ *Youth Attitude Tracking Study 1992: Propensity and Advertising Report* (Arlington, VA: Defense Manpower Data Center, 1993), pp. 3-1 - 3-5; Memorandum from Edwin Dorn, Assistant Secretary of Defense (Personnel and Readiness), Subject: 1993 Youth Attitude Tracking Study, January 21, 1994.

¹⁷ See Claiborne, W., "Fighting School Failure Among Hispanics," *The Washington Post* (October 12, 1994), pp. A1, A19.

"Other" minorities. Members of "Other" racial minorities (e.g., American Indians, Asians/Pacific Islanders) are slightly underrepresented in the Services. The proportion of "Other" minorities ranges from 3.4 to 4.0 in the Services, with the Navy the highest. In the civilian population, 4.1 percent of 18- to 24-year-olds are "Other" racial minorities.

Gender. Figure 2.3 illustrates the trend in the proportion of female recruits since the start of the all-volunteer force. Appendix Table D-8 shows the number and proportion of NPS female accessions by Service in FY 1964, and FYs 1970 through 1994.

Figure 2.3. Women as a proportion of Active Component NPS accessions, FYs 1973-1994.

While the Services have increased their proportions of women (16 percent in FY 1994), the proportions and numbers are not comparable to female representation in the civilian population (51 percent). One reason for the difference includes lower inclination of women than men to apply for and enter the military.¹⁸ With recent policy changes concerning women in combat,¹⁹ more women

¹⁸ The annual DoD-sponsored Youth Attitude Tracking Study indicates that young women, depending upon age, have between one-third and two-thirds less inclination to join the military than young men.

¹⁹ Memorandum from Les Aspin, Secretary of Defense, Subject: Policy on the Assignment of Women in the Armed Forces, April 28, 1993; Memorandum from Les Aspin, Secretary of Defense, Subject: Direct Ground Combat Definition and Assignment Rule, January 13, 1994.

may enter the Services and retention may increase among female members. However, the gender-integration policy will not have an effect on the numbers of women until at least FY 1995 – the first year under the new rules.²⁰

Marital status. The majority of accessions are young high school graduates and the military is often their first full-time job. Thus, very few are married. In FY 1994, 9 percent of male and 13 percent of female recruits were married, compared to 59 and 49 percent of male and female enlisted members, respectively. Table 2.5 compares marriage rates of accessions in the Services with 18- to 24-year-old civilians in the labor force. Civilians are more likely to be married than accessions (18 versus 9 percent). Within the Services, Army recruits are most likely to be married (16 percent) and Marine Corps recruits are least likely (3 percent). Figure 2.4 shows marital status trends for FYs 1976 to 1994 by Service.

Table 2.5. FY 1994 Active Component NPS Accessions Who Are Married, by Gender and Service, and Civilians 18-24 Years Old (Percent)						
Gender	Army	Navy	Marine Corps	Air Force	DoD	18-24 Year-Old Civilians
Males	15.5	4.1	2.9	10.2	8.7	13.2
Females	20.5	6.2	4.5	12.1	13.1	22.8
Total	16.4	4.4	3.0	10.6	9.4	18.1
Also see Appendix Table B-2 (Marital Status by Age and Gender). Source: Civilian data from Bureau of Labor Statistics Current Population Survey File, October 1993 - September 1994.						

Education. More than 30 years of research indicates that enlistees who are high school graduates are much more likely than non-graduates to complete their first term of enlistment (80 percent versus 50 percent).²¹ In the late 1960s and early 1970s, the Services gave high school graduates, including those with alternative education credentials, higher priority for enlistment. In the mid- to late 1970s, the Army, Navy, and Air Force classified GED holders and high school graduates differently because evidence showed that persons with GED certification experienced higher first-term attrition. Today, in all Services, applicants with GEDs need higher AFQT scores to enlist than do high school diploma graduates.

²⁰ Memorandum from William Perry, Secretary of Defense, Subject: Application of the Definition of Direct Ground Combat and Assignment Rule, July 28, 1994.

²¹ See Flyer, E.S., *Factors Relating to Discharge for Unsuitability Among 1956 Airman Accessions to the Air Force* (Lackland AFB, TX: Personnel Research Laboratory, December 1959); Elster, R.E. and Flyer, E.S., *A Study of the Relationship Between Educational Credentials and Military Performance Criteria* (Monterey, CA: Naval Postgraduate School, July 1981); and Lindsley, D.H., *Recruiting of Women*, presented to 1995 Committee on Women in the NATO Forces Conference, June 2, 1995.

Figure 2.4. Marital status trends by Service, FYs 1976-1994.

Additional research indicates that those with other alternative credentials, such as adult education and correspondence school diplomas, also have attrition rates greater than regular high school graduates.²² In 1987, DoD implemented a three-tier classification of education credentials. Table 2.6 shows the percentage of FY 1994 active duty NPS accessions by education tier. Ninety-six percent of recruits possessed high school diplomas and/or some college education (Tier 1); 3 percent held alternative high school credentials (Tier 2); and one percent had not completed high school (Tier 3). It should be noted that enlisted occupations are generally comparable to civilian jobs not requiring college education.

While 99 percent of FY 1994 accessions were in Tiers 1 and 2, only 80 percent of 18- to 24-year-old civilians are high school graduates or possess a GED certificate. Differences among Services in FY 1994 high school graduate accessions are small, from 99 percent in the Air Force to 95 percent in the other Services. The Navy has the highest proportion of recruits with Tier 2 credentials (3 percent); the Air Force has the lowest (less than 1 percent).

²² Laurence, J.H., *Military Enlistment Policy and Educational Credentials: Evaluation and Improvement* (Alexandria, VA: Human Resources Research Organization, September 1987).

Table 2.6 Levels of Education of FY 1994 Active Component NPS Accessions, by Service, and Civilians 18-24 Years Old (Percent)						
Education Level ¹	Army	Navy	Marine Corps	Air Force	DoD	18-24 Year-Old Civilians*

College Experience (Part of Tier 1) ²	7.5	4.0	2.8	2.6	4.8	47.4
Columns may not add to total due to rounding. * Civilian numbers and percentages combine Tiers 1 and 2 as civilian data include GED certificates with high school graduate rates. ¹ Service data from OASD(FMP)(MPP)/Accession Policy are "cleaned" by the services for official submission. Data presented in this table may differ slightly from the data shown in appendix tables which are taken from DMDC's USMEPCOM Edit File. ² College experience data for the Services are taken from the education certificate variable of DMDC's USMEPCOM Edit File for September 1994. College experience is defined as those individuals with the following credentials: associate degree, professional nursing diploma, baccalaureate, master's, post master's, doctorate, first-professional, or completed one semester of college. Also see Appendix Tables B-7 (Education by Service and Gender) and B-8 (Education by Service and Race/Ethnicity). Source: Service data from OASD(FMP)(MPP)/Accession Policy – submitted in accordance with DoD Instruction 7730.56. Civilian data from Bureau of Labor Statistics Current Population Survey File, October 1993 - September 1994.						

The proportion of accessions with high school diplomas by Service for FYs 1973 through 1994 is shown in Figure 2.5. During most of the first decade of the volunteer military (FYs 1973-1982), there were significant differences among the Services in the proportion of high school diploma graduates. In addition, there were significant variations across years. Across Services, the proportion of accessions with high school diplomas fell from 75 percent in FY 1978 to 66 percent in FY 1980. The drop was most pronounced in the Army, declining from 73 to 52 percent over that period.

During the mid-1970s, the Services operated with reduced recruiting budgets. At the same time, there were highly publicized reports of shrinking military benefits and significant gaps in pay comparability with the civilian sector. Media articles cited the hemorrhage of talent from the Services due to loss of benefits, and the percentage of Servicemembers eligible for food stamps.

Because of lower education levels of new recruits, lower test scores, and increasing minority representation during this period, debates began on whether to replace the volunteer force with either a form of national service or a return to the draft.²³ The Executive and Legislative branches of

²³ In December 1976, the Department of Defense released a report, *The All Volunteer Force: Current Status and Prospects*, which listed seven alternatives to the all-volunteer military. On June 20, 1978, the Senate Subcommittee on

government funded major initiatives to reinvigorate the volunteer military, enhance recruiting programs, and improve Servicemembers' quality of life. Military pay and benefits and recruiting resources were increased substantially in 1981, resulting in a rapid increase in the quality of accessions. The proportion of high school graduate recruits jumped from 66 percent in FY 1980 to 83 percent in FY 1982. Further incentives, such as the Montgomery GI Bill and the Army and Navy College Funds, and the Services' emphasis on improving the quality of life for Servicemembers and their families led to improved recruiting. The proportion of high school graduates climbed to 98 percent in FY 1992. In FY 1994, the proportion of high school graduates was 96 percent.

Figure 2.5. Active Component accessions with high school diplomas, FYs 1973-1994.

Figure 2.6 compares FY 1994 accessions with civilians of similar age on the percentage of high school graduates (Tier 1) and those with alternative credentials (Tier 2), by gender and race/ethnicity. While virtually all military recruits are in Tiers 1 and 2, the same is not true of 18- to 24-year-old civilians. Some dramatic differences in education level, by race/ethnicity, are evident in Figure 2.6. Only 74 percent of Black civilians and 58 percent of Hispanic civilians have high

Manpower and Personnel of the Committee on Armed Services conducted an extensive hearing, *Status of the All-Volunteer Armed Force*, on the problems of a volunteer force and the need to examine alternatives to the all-volunteer military.

school diplomas or alternative credentials. Given these percentages, the Services' minority recruiting pool is limited. Thus the race/ethnicity representation comparisons should be interpreted with these data in mind.

Figure 2.6. FY 1994 accessions and 18-24 year-old civilians who earned high school diplomas (Tier 1) or alternative credentials (Tier 2), by gender and race/ethnicity.

AFQT. AFQT scores are the primary measure of recruit potential. Figure 2.7 indicates the percentage of NPS recruits who scored at or above the 50th percentile (Categories I - IIIA) since FY 1973. Numerical data are in Appendix D, Table D-11. The drop in Category I - IIIA recruits after FY 1976 was due primarily to the miscalibration of the ASVAB.²⁴ In 1976, when new versions of the ASVAB were introduced, an error in calibrating the score scales made the new versions "easier" than the old versions (i.e., applicants received test scores higher than their actual ability). An independent study of the calibration was made and the test correctly calibrated in 1980. Then,

²⁴ See two documents: Sims, W.H. and Truss, A.R., *A Reexamination of the Normalization of Armed Services Vocational Aptitude Battery (ASVAB) Forms 6, 7, 6E, and 7E* (Alexandria, VA: Center for Naval Analyses, September 1980); and Laurence, J.H. and Ramsberger, P.F., *Low-Aptitude Men in the Military: Who Profits, Who Pays?* (New York: Praeger, 1992).

Congress added legal provisions stipulating that no more than 20 percent of accessions could be in Category IV and that such accessions had to be high school diploma graduates.²⁵

Figure 2.7. Percentage of NPS accessions in AFQT categories I-III, FYs 1973-1994.

Figure 2.7 shows FY 1977 as the low point and FY 1992 as the high point in accessing recruits in Categories I to IIIA. In FY 1977, 34 percent of accessions scored in the top half of the AFQT distribution.²⁶ Only 13 percent of Blacks, 19 percent of Hispanics, and 20 percent of "Others" scored in Categories I-III. Fifteen years later, in FY 1992, the majority of minority accessions achieved scores in the I-III range (Blacks - 56 percent, Hispanics - 67 percent, "Others" - 67 percent). Hispanics have shown the most marked increase, with a 48-percentage-point gain in Category I to IIIA accessions from FY 1977 to FY 1992.

A graphic view of the trend in the AFQT performance of accessions is provided in Figure 2.8. The figure clearly indicates the increase in AFQT scores of accessions from FY 1981

²⁵ 10 U.S.C. 520.

²⁶ Data from Defense Manpower Data Center.

through 1992. The more significant gains were in Categories I to IIIA, where the percentages increased year by year from 47 percent of accessions in FY 1981 to 75 percent of accessions in FY 1992. Conversely, there has been a steady decline in the percentage of Category IIIB accessions. Most dramatic has been the decrease in accessions who score in Category IV -- from 33 percent of accessions in FY 1979 to less than one percent since FY 1991.

Figure 2.8. Percentage of NPS accessions in AFQT categories, FYs 1973-1994.

The percentages of FY 1994 active duty NPS accessions in each AFQT category, by Service, and similar data for civilian youth are shown in Table 2.7. The percentage of recruits in Categories I and II was higher than for their civilian counterparts (male - 43 versus 39 percent; female - 39 versus 33 percent). Category III accessions greatly exceeded civilian group proportions (males - 56 versus 30 percent; females - 61 versus 37 percent), while the percentage of recruits in Category IV was much lower than in the civilian population (males - less than 1 percent versus 20 percent; females - less than 1 percent versus 22 percent). There were no Category V enlistees, while 10 percent of civilian males and 9 percent of civilian females scored in this range.

Columns may not add to total due to rounding. * Less than one-tenth of one percent. ** The 1980 civilian comparison group distribution for the total population (males and females) is 7 percent in Category I, 28 percent in Category II, 15 percent in Category IIIA, 19 percent in Category IIIB, 21 percent in Category IV, and 10 percent in Category V. ¹ Service data from OASD(FMP)(MPP)/Accession Policy are "cleaned" by the services for official submission. Data presented in this table may differ slightly from the data shown in appendix tables which are taken from DMDC's USMEPCOM Edit File. Also see Appendix Tables B-5 (AFQT by Service and Gender) and B-6 (AFQT by Service and Race/Ethnicity). Source: Service data from OASD(FMP)(MPP)/Accessions Policy -- submitted in accordance with DoD Instruction 7730.56. Civilian data from <i>Profile of American Youth</i> (Washington, DC: Office of the Assistant Secretary of Defense [Manpower, Reserve Affairs, and Logistics], March 1982).						

Seventy-two percent of recruits scored at or above the 50th percentile on the AFQT (Categories I-III A). Air Force recruits scored higher than those of the other three Services. Eighty-one percent of Air Force recruits scored in Categories I-III A, compared to 71 percent of Army, 68 percent of Navy, and 71 percent of Marine Corps recruits.

High quality. One impact of the defense drawdown is the Services' redesign of a number of career fields, with incumbents assuming a more diverse workload and greater responsibilities. The redesign will both increase the numbers of tasks assigned to an individual, and require incumbents to perform new tasks of greater complexity.²⁷ The Services believe that as the levels of job/task difficulty and importance increase, so will the need to bring in and retain greater proportions of individuals with above-average aptitude. The Services define high-quality recruits as high school graduates who score in the top 50 percent on the AFQT, Categories I through III A.

The trends in the proportion of high-quality accessions since FY 1973 are shown in Figure 2.9. The significant increases generated some criticism that Service quality standards were too high. In FY 1994, there was a slight drop in quality in all Services except the Air Force.

Figure 2.9. Percentage of high-quality NPS accessions, FYs 1973-1994.

²⁷ See Sellman, W.S., *Since We Are Reinventing Everything Else, Why Not Occupational Analysis?* Keynote address to the 9th Occupational Analyst Workshop, San Antonio, Texas, May 31 - June 2, 1995.

Reading ability. Because reading requirements for many military occupations are substantial, reading ability of recruits is important. The reading grade level (RGL) is estimated by converting the ASVAB verbal composite score to its RGL equivalent.²⁸ Table 2.8 shows that the mean RGL for FY 1994 recruits was at a level that would be expected of an 11th grade student, compared to 10th grade level for the average FY 1984 accession.

Table 2.8. Mean Reading Grade Level of FY 1984-1994 Active Component NPS Accessions, by Service, and 1980 Civilians 18-23 Years Old (Percent)						
Fiscal Year	Army	Navy	Marine Corps	Air Force	DoD	1980 Civilian Youth Population

1994	11.4	11.3	11.2	11.7	11.4	
Source: 1980 civilian youth population data from the <i>Profile of American Youth</i> (Washington, DC: Office of the Assistant Secretary of Defense [Manpower, Reserve Affairs, and Logistics], March 1982); and Waters, et al., <i>Estimating the Reading Skills of Military Applicants: The Development of an ASVAB to RGL Conversion Table</i> (Alexandria, VA: Human Resources Research Organization, October 1988).						

Inter-Service differences in RGL were relatively small in FY 1994, with mean RGLs ranging from 11.2 for the Marine Corps to 11.7 for the Air Force. The 1980 nationally representative sample of 18- to 23-year-olds, on whom ASVAB scores are based, read at a mean 10th grade level.

Geography. The percentages of recruits from some census regions of the United States have remained fairly stable since the inception of the volunteer force. However, as Figure 2.10 illustrates, in other regions some substantial shifts have taken place. The percentage of accessions from the

²⁸ See Waters, B.K., Barnes, J.D., Foley, P., Steinhaus, S.D., and Brown, D.C., *Estimating the Reading Skills of Military Applicants: The Development of an ASVAB to RGL Conversion Table* (Alexandria, VA: Human Resources Research Organization, October 1988).

Northeast dropped 7 points from a high of 22 percent in FY 1977 to 15 percent in FY 1994. Concomitantly, the proportion of accessions from the South increased 9 percentage points, from 33 percent in FY 1982 to 42 percent in FY 1994.

Figure 2.10. NPS accessions by geographic region, FYs 1973-1994.

Changes in geographical representation are related to factors such as shifts in demographic patterns, unemployment, college enrollment, and employment compensation rates, which vary widely across regions of the country.²⁹ Obviously, no one factor can explain variations in enlistment rates between different sections of the country; they are more likely attributable to a wide array of economic, social, and demographic factors.

Table 2.9 presents FY 1994 accession statistics by region, division, and state. The third and fourth columns show the percentages of accessions and percentages of the 18- to 24-year-old civilian population in each area. The fifth column presents military/civilian representation ratios--the percentage of enlisted accessions divided by the percentage of civilians in each area. A representation ratio of 1.00 means that the area has the same proportion of accessions as of the youth population -- for example, 8 percent of all recruits and 8 percent of all youth aged 18-24. A ratio of less than 1.00 means that relatively few youth in an area enlist in the military, while a ratio of more

TOTAL (50 STATES + D.C.)	175,099**	100.0	100.0	1.0	66.2	61.2
Columns may not add to total due to rounding. * High-quality accessions are high school graduates who score at or above the 50th percentile on the AFQT. This column is the number of high-quality accessions in area divided by the total number of accessions in area. ** Does not include 1,310 recruits from the territories and unknowns. Source: Civilian data from Bureau of Labor Statistics Current Population Survey File, October 1993 - September 1994.						

of more than 1.00 indicates above average market penetration. The last two columns of the table present the percentages of high-quality accessions (high school graduates in AFQT Categories I-III) and mean AFQT scores for each area.

The South Region had the greatest ratio of enlistees (1.2), with only Delaware, Tennessee, and the District of Columbia having ratios less than one. The West South Central and South Atlantic Divisions had the strongest representation (1.2 each).

The Northeast Region had the lowest ratio (.8), with Massachusetts, Rhode Island, Connecticut, New York, and New Jersey having representation ratios less than one. New Hampshire and Maine had ratios greater than one. The North Central Region had 6 of 12 states with ratios at or higher than one. The ratios ranged from .6 in Minnesota to 1.2 in South Dakota.

West Region ratios ranged from .5 in Hawaii to 1.7 in Montana. While Hawaii's ratio was among the lowest in the nation, its influence on the region's total was minor due to its small youth population (less than one percent of the nation's 18- to 24-year-olds). California, home to more than 12 percent of the U.S. youth population, dominated the statistics in the West Region. California's 1994 ratio was .8. By comparison, Texas, with the second largest youth population (8 percent of 18- to 24-year-olds), had a ratio of 1.2.

The sixth column of Table 2.9 shows the proportion of high-quality accessions by geographical area. There were only minor differences by region in FY 1994. The proportion of high-quality accessions by region ranged from a low of 64 percent in the South to a high of 68 percent in the North Central. Differences across divisions were somewhat larger. Ten percentage points separated the East South Central and West North Central Divisions. Differences at the state level were larger, ranging from 44 percent in the District of Columbia to 81 percent in North Dakota.

The last column of Table 2.9 shows the mean AFQT score by each geographical area. Occasionally interest has been expressed in using AFQT scores as an indicator of the performance of state educational systems. AFQT statistics are not particularly useful for this purpose for several reasons. As a sample of youth in a state, ASVAB test-takers reflect a number of selection biases, the total effect of which is unknown. Those who take the test as part of the enlistment process exclude many who intend to enroll in college, prospects who fail the enlistment screening test, and those who do not have an interest in military enlistment. Therefore, youth who take the ASVAB should not be presumed to be representative of the communities or school systems from which they are drawn. Even without the biases, it would be difficult to determine how much the test scores reflect differences in school performance from state to state, or how much they reflect other state characteristics, such as social composition and economic conditions. In sum, while the ASVAB is an excellent instrument for the purposes for which it was designed, it does not provide valid state-by-state performance data.

Nevertheless, AFQT scores by state may be of interest for purposes other than assessing school system performance. The AFQT figures in Table 2.9 reflect the mean AFQT scores for accessions in each state. A score of 50 is the median for all test-takers; the mean scores displayed are all above 50 because low-scoring applicants are screened out.

Chapter 3

ACTIVE COMPONENT ENLISTED FORCE

DoD continued the scheduled reduction of military forces in FY 1994. At the end of the fiscal year, enlisted force end-strength was 1.35 million, the smallest since 1947-1950 (between World War II and the Korean War) when the enlisted force averaged 1.34 million members. Figure 3.1 displays trend lines for the active duty enlisted force size since FY 1973, and Appendix Table D-14 provides end-strength data by year and by Service for FYs 1964 and 1973 through 1994. Although there were concerns that minority and female Servicemembers might be disproportionately affected by the drawdown, the demographic composition of the enlisted force did not change significantly in FY 1994.¹

Figure 3.1. Active Component enlisted force end-strength, FYs 1973-1994.

¹ Throughout this chapter, the Active Component enlisted force is compared with the civilian labor force, ages 18-44, from Bureau of Labor Statistics Current Population Survey File, September 1994.

Characteristics of Active Component Enlisted Force

Age. Trained person-years are more important than end-strength when evaluating personnel readiness. Greater proportions of trained person-years reduce training costs and enable the Services to cut recruiting objectives. To gain increased person-years with the same number of Servicemembers, DoD and Service planners increase the mean initial term of enlistment and restructure the mix of first-term and career force personnel. In addition to the planned increase in months of service, drawdown targets are met, in part, by reducing recruiting objectives.

The mean number of months in service per Servicemember is highlighted in Figure 3.2. Mean time in service rose from 67 months in FY 1980 to 90 months in FY 1994 (an increase of more than 34 percent). The planned increase in service months combined with the drawdown also resulted in an increase in mean age of the Services' enlisted force to more than 27 years old.

Figure 3.2. Active Component enlisted force average age and months in service, FYs 1973-1994.

Force structure, retention, and personnel policies govern the distribution of Servicemembers by occupation and grade. These factors have resulted in an overall DoD force profile wherein approximately half the force (51 percent) has less than 6 years of service, with

slightly less than half (45 percent) having 6 to 19 years, and 4 percent having more than 20 years.² Service differences primarily are the result of retention trends as well as the force structure and personnel requirements needed to support Service-unique roles and missions. Thus, time in service and age data should be interpreted cautiously.

In FY 1994, 44 percent of the enlisted force was 17-24 years old and 1 percent was older than 44, as shown in Table 3.1. For those who make the military a career, the 20-year retirement option results in many leaving service while in their late 30s and early 40s. In the Army, Navy, and Marine Corps, a large proportion of the enlisted force was under age 25 (45, 44, and 66 percent, respectively). Air Force members were the "oldest" with less than 34 percent under age 25, and more than 7 percent over 39. The Air Force traditionally has older accessions and higher retention rates.

Table 3.1. FY 1994 Age of Active Component Enlisted Members, by Service, and Civilian Labor Force 17 Years and Older (Percent)						
Age	Army	Navy	Marine Corps	Air Force	DoD	Civilian Labor Force
17-19	7.8	9.2	16.4	5.7	8.7	4.4
20-24	37.1	35.0	49.3	27.8	35.6	10.7
25-29	22.0	20.9	14.5	22.4	20.9	12.3
30-34	15.6	17.2	10.1	21.5	16.9	14.1
35-39	11.8	11.9	7.0	15.5	12.2	14.3
40-44	4.4	4.6	2.1	6.0	4.6	13.1
45-49	1.1	1.2	0.6	1.0	1.0	11.0
50+	0.2	0.1	0.1	0.1	0.1	20.0
Unknown	0.1	*	*	0.0	*	0.0
Total	100.0	100.0	100.0	100.0	100.0	100.0
Columns may not add to total due to rounding. * Less than one-tenth of one percent. Also see Appendix Table B-13 (Active Component by Age, Service, and Gender). Source: Civilian data from Bureau of Labor Statistics Current Population Survey File, September 1994.						

While nearly half of the enlisted force was 17-24, less than one-sixth of the civilian labor force fell in this range. At the other end of the distribution, one-fifth of the civilian labor force was 50 years old or older, compared with less than one percent of enlisted members.

² See Timenes, N., Jr., *Force Reductions and Restructuring in the United States*, presented to NATO Seminar on Defense Policy and Management, Brussels, Belgium, July 2, 1992. The derived force was based on the distribution by years of service from FY 1987 through FY 1989--a period of stable funding.

Race/ethnicity. The military attracts and retains higher proportions of Blacks and "Other" minority groups but lower proportions of Hispanics than are in the civilian labor force. As Table 3.2 indicates, the overall proportion of enlisted minorities was higher than in the civilian labor force in FY 1994 (32 and 26 percent, respectively). However, Hispanics were underrepresented among enlisted members (6 percent versus 11 percent).

Table 3.2. FY 1994 Race/Ethnicity of Active Component Enlisted Members, by Service, and Civilian Labor Force 18-44 Years Old (Percent)						
Race/ Ethnicity	Army	Navy	Marine Corps	Air Force	DoD	18-44 Year-Old Civilians
White	58.8	69.0	70.1	76.6	67.7	74.3
Black	30.3	18.0	17.3	16.8	21.8	11.8
Hispanic	5.3	7.1	9.2	3.9	6.0	10.6
Other	5.5	5.7	3.5	2.7	4.6	3.3
Total	100.0	100.0	100.0	100.0	100.0	100.0
Columns may not add to total due to rounding. Also see Appendix Tables B-15 (Race/Ethnicity by Service and Gender) and B-18 (Ethnicity by Service and Education). Source: Civilian data from Bureau of Labor Statistics Current Population Survey File, September 1994.						

Twenty-two percent of the enlisted force was Black, compared with 12 percent of the civilian labor force (18-44 year-olds). This near 2:1 ratio for Black members was higher than for FY 1994 accessions, primarily because retention was higher among minorities than Whites. The Army had the highest proportion of Black enlisted members in FY 1994 (30 percent).

Changes over time in the percentage of Black enlisted members in each Service are shown in Figure 3.3. Black soldiers in the Army increased from 18 percent in FY 1973 to a high of 33 percent in FY 1981. That proportion decreased to 30 percent by the mid-1980s, in large part due to an increase in entrance standards and the Army's decision not to renew enlistment contracts of low-scoring members who entered during the ASVAB misnorming. The proportion of Blacks in the Army has remained stable since 1983 at 30 to 32 percent.

The Marines and the Air Force show similar patterns. Slight decreases in recent years parallel the drop in minority accessions over the last three years and the concomitant decrease in the propensity to enlist among Black youth. Black male propensity has declined 22 percentage points since 1989.³ The Navy, on the other hand, has exhibited a consistent long-term increase in the proportion of Blacks, from 8 percent in FY 1973 to its current 18 percent. In all Services, the percentage of female members who are black significantly exceeds the percentage of male members who are black.

³ Memorandum from F. Pang, Assistant Secretary of Defense (Force Management Policy), Subject: 1994 Youth Attitude Tracking Study, February 22, 1995.

Figure 3.3. Blacks as a percentage of Active Component enlisted members, by Service, FYs 1973-1994.

In FY 1994, active duty Hispanic enlisted members were a smaller part of the enlisted force than of the civilian labor force in the 18-44 age group. Six percent of Servicemembers were Hispanic, compared to 11 percent of the civilian labor force. The highest representation of Hispanics was in the Marine Corps (9 percent). The proportions of "Other" minority individuals in the Army and Navy were similar (nearly 6 percent), while the Air Force and Marine Corps had somewhat less (3 and 4 percent, respectively).

Gender. Trends in the percentage of enlisted women since 1973 are shown in Figure 3.4 (Appendix Table D-18 provides numerical data). Four factors affect the proportion of enlisted female members. First, women have a lower inclination to enlist than men do⁴; only 13 percent

⁴ *Youth Attitude Tracking Study 1991: Propensity and Advertising Report* (Arlington, VA: Defense Manpower Data Center, 1993), pp. 3-1 - 3-11.

of females age 16-21 planned to enlist in 1994 compared to 26 percent of males age 16-21.⁵ Second, combat exclusion policies restrict the positions and skills in which women may serve. However, as directed by former Secretary of Defense Les Aspin, the Services have opened more positions for women. Since transitioning to a gender-neutral recruiting program, the Air Force has increased its proportion of women recruits, from 20 percent in FY 1990 to 24 percent in FY 1994. The Navy, now employing gender-neutral recruiting, has increased its proportion of women accessions -- 17 percent in FY 1994 compared to 13 percent in FY 1993. Third, the military personnel system is a "closed" system. Growth must come from within, and from the bottom up; lateral entries play no significant role. Consequently, the gender structure of the career force is shaped primarily by the proportion of females recruited. Fourth, women leave the Services at a higher rate than men. Thus, the percentage of women in the military will not change much from current levels unless there are significant increases in female recruiting or retention.

Figure 3.4. Women as a percentage of Active Component enlisted members, by Service, FYs 1973-1994.

⁵ Memorandum from F. Pang, Assistant Secretary of Defense (Force Management Policy), Subject: 1994 Youth Attitude Tracking Study, February 22, 1995.

The increase in women in the military since FY 1972 brought about significant changes across all aspects of personnel management: in training programs and physical fitness regimens, in assignments, in living arrangements, and in medical services. It also created new administrative issues regarding pregnancy, the proportion of single parents in the military, child care arrangements during peacetime and deployment, and dual-service marriages (where husband and wife both serve in uniform).

As a result of recent policy changes,⁶ almost 260,000 additional positions are open to women. More than 90 percent of the career fields are now open to women: 91 percent in the Army, 96 percent in the Navy, 93 percent in the Marine Corps, and 99 percent in the Air Force.⁷ Current Secretary of Defense William Perry supports the new policies on the assignment of women:

In our review of the assignment of women, our overarching goal has been to maintain a high quality, ready and effective force. By increasing the number of units and positions to which women can be assigned, the Military Services gain greater flexibility in the development and use of human resources. With this flexibility, the Services can expand their recruiting base, making it easier to find high quality people, and ensure that the best qualified person is assigned to each position.⁸

Gradual increases in the proportion of women in the military underscore the Services' commitment to recruit and retain women.

As shown in Table 3.3, the Air Force has the highest proportion of enlisted women on active duty (16 percent), while the Marine Corps has the lowest (5 percent). Percentages in the Army and Navy are 13 and 11 percent, respectively. The differences are primarily a function of the proportion of combat and combat-related positions closed to women in each Service. Overall, the proportion of enlisted women has slightly increased over the past three years, from 10.8 to 12.1 percent from FY 1991 to FY 1994 (Appendix Table D-18).

Marital status. Trends in marital status of active duty members are shown in Figure 3.5. The proportion of married enlisted members declined from FY 1977 (50 percent) to FY 1980 (47 percent). In FY 1981 the proportion began to increase, and in FY 1994 it was 57 percent. Marital status varies by Service. Air Force members are most likely to be married (67 percent in 1994), while Marines are least likely to marry (45 percent).

⁶ Former Secretary of Defense Les Aspin directed the Services to open more specialties and assignments to women. Aircraft, including those engaged in combat missions, and Navy ships (where possible) were opened to qualified women. A direct ground combat rule--restricting women from direct combat on the ground--replaced the Risk Rule and was adopted effective October 1, 1994.

Figure 3.5. Percentage of married members by Service, FYs 1973-1994.

The percentages of FY 1994 Active Component enlisted married males and females are shown by Service in Table 3.4. Proportionally, more Servicemen were married than Servicewomen (59 and 49 percent, respectively), while the percentages for civilian men and women were nearly identical (55 versus 54 percent, respectively). The proportion of married

Servicemen was slightly higher than married 18- to 44-year-old men in the civilian population (59 and 55 percent, respectively). The proportion of married Servicewomen was lower than that of women in the comparable civilian population (49 and 54 percent, respectively).

Table 3.4. FY 1994 Active Component Enlisted Members Who Were Married, by Gender and Service, and Civilian Labor Force 18-44 Years Old (Percent)						
Gender	Army	Navy	Marine Corps	Air Force	DoD	18-44 Year-Old Civilians
Male	58.4	55.8	44.7	69.2	58.5	55.4
Female	48.8	41.6	42.4	55.6	48.8	54.4
Total	57.2	54.3	44.6	67.1	57.4	54.9
Also see Appendix Table B-14 (Age by Marital Status and Gender). Source: Civilian data from Bureau of Labor Statistics Current Population Survey File, September 1994.						

The percentage of married military women has changed significantly since FY 1973.⁹ In that year, 18 percent of military women were married, increasing to 36 percent in FY 1978, 41 percent in FY 1983, and 49 percent in FY 1994. Twenty years ago, because of legal restrictions, women constituted less than 2 percent of military members. Military women were not expected to be married; retention directives implicitly encouraged separation of married enlisted women, with clauses for mandatory separation of women having a child.

During and after the Gulf War, questions were raised regarding the deployment of both parents in a dual-service marriage (i.e., a marriage wherein both husband and wife are military members). The proportion of members in each Service who are married and the proportion of those married who are members of a dual-service marriage are shown in Table 3.5. Larger proportions of men than women are married, but significantly greater proportions of women are members of dual-service marriages (50 percent versus 6 percent). The Marine Corps has the greatest variance, with 4 percent of married men but 61 percent of married women in dual-service marriages. Proportionally, more Air Force personnel are members of dual-service marriages (15 percent).

Education. The majority of the enlisted force have high school diplomas (96 percent), as indicated in Table 3.6. In FY 1994, 99 percent of female Servicemembers and 95 percent of male enlisted personnel were high school diploma graduates (Tier 1). There were fewer high school dropouts in the military than in the civilian labor force (1 versus 11 percent), and fewer people with college experience (24 versus 55 percent). This latter comparison is misleading because enlisted occupations are generally comparable to civilian occupations that do not require college degrees. Most military members with college degrees are officers (94 percent of officers

⁹ Department of Defense, *Population Representation in the Military Services: Fiscal Year 1989* (Washington, DC: Office of the Assistant Secretary of Defense [Force Management and Personnel], July 1990).

have undergraduate or advanced degrees). The education levels of the officer corps are discussed in Chapter 4.

Table 3.5. FY 1994 Active Component Enlisted Personnel Who Were Married, and in Dual-Service Marriages, by Gender and Service (Number and Percent)					
Gender	End-Strength	Married		Married Who Were In Dual-Service Marriages	
		Number	Percent	Number*	Percent**
ARMY

<p>* Civilian percentages combine Tiers 1 and 2.</p> <p>** Less than one-tenth of one percent.</p> <p>¹ Military data represent only enlisted members. Officers, who usually have college degrees, are not included. See Chapter 5 for a discussion of officers.</p> <p>Also see Appendix Tables B-17 (Education by Service and Gender) and B-18 (Education by Service and Race/Ethnicity).</p> <p>Source: Civilian data from Bureau of Labor Statistics Current Population Survey File, September 1994.</p>						

The Army, Navy, and Marine Corps had roughly the same proportion of high school graduate enlisted members in FY 1994, ranging from 93 to 95 percent. Almost all Air Force members held diplomas (99+ percent). The Navy had the largest proportion with alternative and no credentials (7 percent), while the Air Force had the smallest (less than half of one percent). Because of the way in which its forces are deployed, Air Force members can more readily schedule and attend off-duty education programs. As a result, more than three-fourths of Air Force members have some college experience¹⁰ — much more than in the other Services (3, 4, and 9 percent, for the Marine Corps, Navy, and Army).

The Services encourage members to continue their education while in the military. In-service tuition assistance programs pay 75 percent of tuition costs. Members also can use the Montgomery GI Bill to cover most or all of the cost of off-duty college and technical courses. The investment in continuing education is a sound one. Enlisted personnel who used tuition assistance had higher promotion rates and stayed in the service longer than those who did not.¹¹

¹⁰ Due to Service coding differences, Air Force college experience data were underrepresented in previous *Population Representation* reports. The FY 1994 Air Force college experience data reflect a coding change.

¹¹ See Boesel, D. and Johnson, K., *The DoD Tuition Assistance Program: Participation and Outcomes* (Arlington, VA: Defense Manpower Data Center, May 1988).

Representation within occupations. The percentages of enlisted personnel by occupational area in FY 1994 are shown in Table 3.7. No shifts in the occupational distribution of the force occurred during that year. Occupations such as infantry and related specialties, craftsmen, and service and supply handling, which tend to have relatively lower AFQT score requirements, include less than one-third of enlisted personnel (30 percent). Many enlisted members (43 percent) are in jobs requiring mid-level skills, including medical and dental specialties, functional support and administration, and electrical/mechanical equipment repair. The high-skilled and high-tech areas -- electronic equipment repair, communications and intelligence specialists, and other allied specialists -- make up about one quarter (22 percent) of the force.

Table 3.7. FY 1994 Occupational Areas of Active Component Enlisted Personnel Within Gender (Percent)				
Occupational Code and Area		Males	Females	Total DoD
0	Infantry, Gun Crews, and Seamanship Specialists	18.3	5.4	16.7
1	Electronic Equipment Repairers	10.4	5.6	9.8
2	Communications and Intelligence Specialists	9.2	9.7	9.2
3	Medical and Dental Specialists	5.3	15.1	6.5
4	Other Allied Specialists	2.5	2.4	2.5
5	Functional Support and Administration	13.7	33.7	16.1
6	Electrical/Mechanical Equipment Repairers	21.6	8.5	20.0
7	Craftsmen	4.4	2.2	4.1
8	Service and Supply Handlers	8.6	10.0	8.8
9	Non-occupational*	6.1	7.4	6.2
Total		100.0	100.0	100.0
Columns may not add to total due to rounding.				
* Non-occupational includes patients, students, those with unassigned duties, and unknowns.				
See Appendix Tables B-19 (Occupational Area by Service and Gender) and B-20 (Occupational Area by Service and Race/Ethnicity).				

The assignment of enlisted personnel to military occupations depends on eligibility (determined by ASVAB scores and sometimes other tests or requirements), individual preference, and the availability of openings. As part of the occupational classification process, the military uses aptitude composites made up of ASVAB subtest scores related to occupations. The composites vary by Service, and are developed empirically to predict the probability of training success.

Men tend to score higher than women on the ASVAB subtests in the mechanical and electronics composites, while women tend to do better on administrative measures. On average, Whites have higher test scores than non-Black minorities, who in turn have higher scores than

Blacks. Within each demographic group, there is wide variation in ASVAB subtest scores, and most recruits qualify for a number of occupations. The recruits' preferences and the availability of openings for which they are qualified determine the occupations to which individuals are assigned.

Representation of women within occupations. The major shift that has occurred in assignment patterns for women in the last two decades has been to increase their presence in "non-traditional" jobs. In the early 1970s, most enlisted women (88 percent) were in two occupational areas: functional support and administration, and medical/dental.¹² By FY 1994, 34 and 15 percent, respectively, served in these occupations. Viewed another way, approximately 12 percent of enlisted women in the 1970s served in areas considered "non-traditional" (gun crews, communications, craftsmen, etc.), and in FY 1994 more than half of all Servicewomen were in these occupations (51 percent).

The proportion of women in combat-related occupational areas (infantry, gun crews, and seamanship) increased one percentage point from FY 1993 to FY 1994 (4.5 to 5.4 percent). Congress' repeal of the combat exclusion law on Navy ships may alter the occupational distribution of Servicewomen in the years to come. However, the first women assigned to a combat ship, the aircraft carrier USS Eisenhower, arrived in March 1994.¹³ Thus, the effect of the new policy probably won't be reflected in data until FY 1995, the first full year under the new assignments, or later.

The gender differences that still exist are illustrated in Table 3.7. In FY 1994, the percentage of women in functional support and administration as well as medical and dental occupations was nearly three times that of men. Although the percentages of women in the technical and craftsmen occupations are greater now than when women first joined the military, men account for the preponderance of Servicemembers in these areas.

Representation of minorities within occupations. In FY 1994, the proportions of Blacks and Whites were similar in five of the nine occupational areas -- infantry, communications and intelligence specialists, medical and dental specialists, other allied specialists, and craftsmen (Table 3.8). In two areas -- electronic equipment repair and electrical/mechanical equipment repair -- the proportion of Whites was substantially higher. Blacks were more heavily represented in the functional support and administration area and, to a lesser extent, the service and supply area. As seen in Table 3.8, in FY 1994, 19 percent of Hispanic enlisted personnel are in combat skills, the highest proportion for any racial/ethnic group.

Chapter 4

ACTIVE COMPONENT COMMISSIONED OFFICERS

Among the mistaken impressions and laments regarding the characteristics of military personnel is that those with college experience, including college graduates, are absent. Data from a previous chapter on enlisted accessions show relatively few with educational experience and credentials beyond a high school diploma. Though there is no draft to draw the college-educated into the enlisted ranks in appreciable numbers, the officer corps almost exclusively comprises college graduates. Thus it is only by looking at the entire force, including its professionals, technicians, managers, administrators, leaders, and commanders, that we gain an appreciation for and understanding of representation levels for the college-educated.

This chapter describes demographic and social characteristics of Active Component officer accessions and the commissioned officer corps in FY 1994.¹ Also highlighted are longitudinal changes among officers. Figure 4.1 illustrates the trend in Active Component officer strength by Service over the last two decades. Supporting data are provided in Appendix Table D-24.

Figure 4.1. Active Component officer end-strength, FYs 1973-1994.

¹ Data are for commissioned officers; warrant officers are excluded for the most part. A brief sketch of warrant officers is presented at the end of the present chapter.

Across Services, active duty officer strength declined by about 4 percent compared to FY 1993. That is, about 11,000 fewer officers were on board at the end of FY 1994 than at the beginning, for a total end-strength of 229,000.

Whereas officer end-strength declined, more officers were commissioned in FY 1994 (almost 16,000 received their commissions) than in the preceding year (see Figure 4.2.). Across Services, there were 6 percent more officer accessions. This was particularly notable for the Marine Corps and the Army with increases of 17 and 12 percent, respectively, in officer accessions over FY 1993. Thus, fine tuning seems to be going on in the officer corps as the drawdown nears completion. Such adjustments in officer accession levels have been common over the past 20 years.

Figure 4.2. Active Component officer accessions, FYs 1973-1994.

Characteristics of Active Component Officers

Table 4.1 shows the number and percentage of FY 1994 Active Component officer accessions and officers by Service. Though the Army is the largest Service, in terms of overall personnel, the Air Force claims the highest officer content. Perhaps owing to the increased

reliance on rapid aviation forces piloted and navigated by officers, and the management thereof, the Air Force stood at 81,000 active duty officers in contrast to the Army's 72,000.

Table 4.1. FY 1994 Active Component Officer Accessions and Officer Corps (Number and Percent) ¹				
Service	Active Component Officer Accessions		Active Component Officer Corps	
	Number	Percent	Number	Percent
Army	5,703	36.3	72,410	31.7
Navy	4,051	25.7	59,265	25.9
Marine Corps	1,221	7.8	16,003	7.0
Air Force	4,755	30.2	81,004	35.4
Total	15,730	100.0	228,682	100.0
¹ End strength reflects commissioned officers only (it excludes warrant officers). Also see Appendix Table B-21 (Age by Service).				

As has been demonstrated in previous years, the accession proportions for the Army and Air Force are somewhat inconsistent with Active Component strengths. The Army accounts for about 32 percent of Active Component officers (3 percentage points less than the Air Force), yet this Service totaled 36 percent of officer accessions (6 percentage points more than the Air Force). Unfortunately, the drawdown clouds the interpretation of such a subtle phenomenon. Among the possible explanations are that the Army and Air Force may be following different drawdown management strategies and/or higher retention reduces Air Force accession needs.

Source of Commission. The criteria for the selection of officers include age, citizenship, physical fitness, moral character, education, and cognitive ability. In addition, academic and personal background characteristics are evaluated. Given that officers form the military's managerial and professional echelons, education and aptitude standards are quite stringent because of the high investment in officer education and training and because of the roles and responsibilities they must undertake.²

With few exceptions, a four-year college degree is a prime requirement for commissioning. Not only are college graduates amply represented in the officer corps, but most receive lucrative financial assistance from the military as well as a top-rate education through various commissioning programs designed to provide academic, military, and physical training and comportment. The primary pathways to receiving a commission as a second lieutenant or an ensign are the Service Academies, Reserve Officers Training Corps (ROTC), Officer Candidate/Training Schools (OCS/OTS), and Direct Commissioning.

² See Eitelberg, M.J., Laurence, J.H., and Brown, D.C., "Becoming Brass: Issues in the Testing, Recruiting, and Selection of American Military Officers," in B.R. Gifford and L.C. Wing (Eds.), *Test Policy in Defense: Lessons from the Military for Education, Training, and Employment* (Boston, MA: Kluwer Academic Publishers, 1991).

The United States Military Academy (USMA), the United States Naval Academy (USNA), and the United States Air Force Academy (USAF A) each offer room, board, medical and dental care, salary, and tuition throughout a four-year undergraduate program of instruction leading to a Bachelor of Science Degree.³ Located at numerous undergraduate colleges and universities throughout the country, ROTC has both scholarship and non-scholarship commissioning programs.⁴ OCS/OTS exists as a rather quick commissioning source for college graduates who have not received military training nor indoctrination as part of their undergraduate education. This source also provides a means for enlisted personnel to earn a commission.

Direct commissions, with a minimum of military training, are offered to professionals in fields such as law, medicine, and the ministry. Because of their advanced degrees, officers directly appointed may be commissioned at ranks higher than the customary second lieutenant or ensign. There are other specialized commissioning sources that together with the main pathways ensure that the Services have access to a number of different pools of college-educated personnel with diverse skills.

Table 4.2 highlights the flexibility afforded officer procurement by the alternative commissioning programs. The largest proportion of FY 1994 officer accessions (40 percent) came through ROTC programs—and most were recipients of a college scholarship. Direct appointments and academy graduates each accounted for 19 percent of incoming officers. OCS/OTS produced about 15 percent of FY 1994 Active Component commissions.

There were Service differences in reliance on the various sources that would appear to be in keeping with their particular missions and emphases. For example, around one-quarter of both Navy and Air Force officers were directly appointed in FY 1994. These relatively large percentages suggest a greater need for medical and other professionals within these Services. In fact, the Navy provides the Marine Corps with medical and religious services, thus increasing the Navy's need for direct commissions and concomitantly lowering the Marine Corps' reliance on such officers. The Marine Corps was unique in that over one-half (54 percent) of its newly commissioned officers came through fast OCS-type pipelines.

Among all officers on active duty, ROTC was again the primary origin (40 percent); however, initial scholarship recipients were less abundant than those who had not received a scholarship. Also in contrast to accession patterns, OCS/OTS graduates accounted for a greater percentage of officers than did those with an academy background (20 vs. 17 percent). Again, there were differences in the source distributions of accessions and the officer corps, with some Services showing less congruency than others. These trends are probably influenced by differing retention rates and historical fluctuations in officer recruiting needs.

³ There is no separate Marine Corps academy, but a percentage of each Naval Academy graduating class pledges to become a Marine Corps officer.

⁴ Non-scholarship ROTC is not without benefits, such as a subsistence allowance upon progression to advanced training.

Table 4.2. FY 1994 Source of Commission of Active Component Officer Accessions and Active Component Officer Corps, by Service (Percent)					
Source of Commission	Army	Navy	Marine Corps	Air Force	DoD

Columns may not add to total due to rounding.					
* Includes officers trained in one Service and accessed into another (primarily Marine Corps).					
Also see Appendix Tables B-30 and B-31 (Source of Commission by Service and Gender).					

Age. As shown in Table 4.3, officers, on average, tend to be older than enlisted personnel. Mean ages of Active Component officers and enlisted personnel at entry in FY 1994 were 23 and 20, respectively. The mean age of all active officers was 34 years and that of enlisted members was 27 years.

Table 4.3. FY 1994 Mean Age of Active Component Officer Accessions and Officer Corps in Comparison to Enlisted Personnel		
	Officers	Enlisted
Active Component Accessions	23.0	19.8
Active Component Force	33.9	27.3
Also see Appendix Table B-21 (Age by Service).		

Figures 4.3 and 4.4 (together with Appendix Table B-21) highlight the military's emphasis on youth. In particular, Marine Corps officer accessions and members of the officer corps were younger than those in other Services. Less than 2 percent of Marine Corps officers were 30 or older upon entry. The proportion within this age range among the other Services' newly commissioned officers was greater but still notably small. The percentage at or over the age of 30 was 12 percent in the Army, 16 percent in the Air Force, and 23 percent in the Navy.

Figure 4.3. Age of FY 1994 Active Component officer accessions, by Service.

Figure 4.5 shows that along with age, there has been a steady increase in the tenure of officers. On average, as of FY 1994, the typical commissioned officer was around 34 years old and had been in uniform for over 10 years.

Race/ethnicity. The percentages of minority officer accessions and active duty officers by Service are shown in Table 4.4. In FY 1994 about 18 percent of entering officers were minorities--Black, Hispanic, and other (e.g., Asian and Pacific Islanders, American Indians, and Alaskan Natives)--contributing to the 13 percent minority officer corps. The most populous minority group--Blacks--were represented at 8 percent of officer accessions and 7 percent of all active duty officers. The Air Force had the smallest proportion of minority officer accessions; however, there were proportionately more "Other" minorities among those newly commissioned in the Air Force in FY 1994. Blacks were more likely to be commissioned and serve in the Army, whereas Hispanics were slightly more numerous in the Marine Corps and Navy.

Figure 4.4. Age of FY 1994 Active Component officer corps, by Service.

Figure 4.5. Active Component officers' average years of age and months of service, FYs 1973-1994.

Total Minority Officers	18.2	11.7	10.1	10.7	13.4
Columns may not add to total due to rounding. Hispanics include all races; "Other" refers to non-White, non-Black, non-Hispanics such as American Indians, Asians and Pacific Islanders, and Native Alaskans. Also see Appendix Table B-24 (Race/Ethnicity by Service).					

The minority representation levels stand in contrast to those encountered among enlistees. This anomaly is more apparent than real. A number of factors contribute to the seeming

underrepresentation of Blacks and Hispanics (though not "Other" minorities) in the officer corps. For reasons too complicated to dissect within this report, minorities disproportionately suffer from the toll of poverty and disorderly learning environments.⁵ These risk factors translate into lower college enrollment and graduation rates and on average lower achievement than other population groups. Although test score trends have improved for minorities over the past two decades, large average differences compared to Whites remain. For example, the mean verbal SAT scores for college-bound seniors in 1994 were 443 for Whites and 352 for Blacks; mean math scores were 495 for Whites and 388 for Blacks.⁶ In light of these and other factors (e.g., fierce labor market competition for minorities who pursue technical majors, most in demand by the Services),⁷ when compared to the 21-35 year-old civilian population of college graduates--the officer pool--which stands at 7 percent Black, 4 percent Hispanic, and 6 percent other, representation among officers appears rather equitable. Blacks and other minorities are proportionately represented and Hispanics are slightly underrepresented--a familiar pattern, seen in the enlisted force.

Academic achievement differences may account partially for the divergent racial/ethnic distributions across the commissioning sources as shown in Tables 4.5 and 4.6. Black and Hispanic minorities are less likely than Whites to be commissioned via one of the academies or ROTC scholarship programs, which tend to be highly selective. DoD is actively looking into issues affecting minority officer recruitment, performance, promotion, and retention in keeping with its track record of dedication to equal opportunity.

In the face of such obstacles to commissioning, minorities (especially Blacks) have come to comprise a larger share of the officer corps over the years (see Appendix Tables D-21, D-22, D-26, and D-27). The past fiscal year had the highest percentage of minorities among officer accessions in over 20 years. Thus minority representation in the total officer corps is rising, albeit slowly.

Gender. As shown in Table 4.7, women constituted about 19 percent of officer accessions and 14 percent of the officer corps in FY 1994. The Air Force holds its place as the most gender-integrated regarding officers, with the Army close on its heels. Though the levels of women in the officer corps are nowhere near college graduate population proportions, there has been sustained growth in the representation of women among officers (see Appendix Tables D-23 and D-28 for trends among accessions and the officer corps since FY 1973). The primary source of commission for women was direct appointment (42 percent) in FY 1994.

Table 4.7. FY 1994 Active Component Female Officer Accessions and Active Component Officer Corps (Percent)					
	Army	Navy	Marine Corps	Air Force	DoD
Active Component Accessions	19.5	16.3	5.9	23.1	18.7
Active Component Officer Corps	14.3	13.2	3.3	15.2	13.6
Also see Appendix Table B-22 (Gender by Service).					

Marital status. As indicated in Table 4.8, officers were more likely to be married than the enlisted personnel that they lead. It is interesting to note that for officers as well as enlisted personnel, women on active duty were less likely than men to be married. In fact, while three-quarters of male officers were married, only 54 percent of women officers had a spouse. Furthermore, whereas male officers were more likely than their civilian counterparts to be married, female officers were less likely to be married. This suggests that women in the officer corps are less traditional than their civilian peers and/or, as posited by Sociologist Mady Segal, the military remains a "greedier" institution for women than for men. That is, there appears to be a greater degree of role conflict for women in the military.⁸

Table 4.8. Married Active Component Officer Corps and Enlisted Personnel, FY 1994, by Gender (Percent)		
Gender	Officers	Enlisted
Males	75.8	58.5
Females	53.8	48.8
Total	72.8	57.4
Also see Appendix Table B-23 (Marital Status by Service).		

Active Component officers were somewhat more likely to be married than their civilian counterparts (college graduates 21 years of age and older). That is, whereas 66 percent of college-educated civilians in the labor market were married, 73 percent of officers had such family ties. This tendency held for men only. Female officers were not only less likely than male officers to be married but were also less likely to have a spouse than their female civilian counterparts.

New officers were less likely to be married than were their civilian counterparts. Twenty-three percent of male officer accessions were married, compared to 51 percent of the 21- to 35-year-old civilian male population with a college degree. The contrast between the military and civilian groups was greater for women with 54 and 24 percent, respectively, of female civilians and new officers married as of FY 1994 (see Appendix Table B-23).

⁸ See Segal, M.W., "The Military and the Family as Greedy Institutions," *Armed Forces and Society*, volume 13, number 1, (Fall 1986), pp. 9-38.

Though female officers are less likely to be married than male officers, among those who are married, women are considerably more likely to be a partner in a dual-military marriage. As can be seen from Table 4.9, married female officers are on the order of ten times more likely than married male officers to have a spouse in uniform. This discrepancy is even more pronounced among Marine Corps married officers with 69 percent of married women in the officer corps married to another Servicemember compared to only 3 percent of married men.

Table 4.9. FY 1994 Active Component Officers Who Were Married, and in Dual-Service Marriages, by Gender and Service (Number and Percent)					
Gender	End-Strength	Married		Married Who Were In Dual-Service Marriages	
		Number	Percent	Number*	Percent

Male	68,682	54,381	79.2	2,692	4.9
Female	12,322	6,976	56.6	2,909	41.7
Total	81,004	61,357	75.7	5,601	9.1
DoD					
Male	197,647	149,763	75.8	6,107	4.0
Female	31,035	16,710	53.8	6,288	37.6
Total	228,682	166,473	72.8	12,395	7.4
* There are some differences between the number of males and females reporting dual-service marriages.					

This trend is more than a curiosity as dual-service marriages pose unique challenges to assignment, deployment, and overall readiness in addition to affecting Servicemembers' satisfaction with military life.

Education. Given the Service requirements that newly commissioned officers have at least a four-year college degree, the education levels of FY 1994 Active Component officer accessions should come as no surprise. Table 4.10 clearly counters the claim that the college-educated are missing from the military. Only 2 percent of officers commissioned in FY 1994 did not have at least a bachelor's degree; most likely, these officers were former enlisted personnel. A notable percentage of officers (11 percent), mostly lawyers, chaplains, and health care professionals (physicians, nurses, etc.), held advanced degrees upon commissioning.

Table 4.10. FY 1994 Educational Attainment of Active Component Officer Accessions and Active Component Officer Corps, by Service (Percent)					
Educational Attainment	Army	Navy	Marine Corps	Air Force	DoD
ACTIVE COMPONENT OFFICER ACCESSIONS					
Less than College Graduate	0.7	0.6	5.1	4.3	2.2
College Graduate (B.A., B.S., etc.)	88.4	93.9	92.6	81.0	87.2
Advanced Degree (M.A., Ph.D., etc.)	10.8	5.4	2.3	14.7	10.5

ACTIVE COMPONENT OFFICER CORPS					
Less than College Graduate	0.6	2.8	4.0	0.6	1.4
College Graduate (B.A., B.S., etc.)	59.3	61.2	79.7	46.7	56.7
Advanced Degree (M.A., Ph.D., etc.)	40.2	35.9	16.3	52.8	41.9
Total	100.0	100.0	100.0	100.0	100.0
Columns may not add to total due to rounding. Percentages do not include "Unknown" data. Also see Appendix Table B-25 (Education by Service).					

Not only are college graduates amply represented among the newly commissioned officers but the education levels found in the officer corps indicate that the Services promote even further education. Significant proportions of officers attained master's and doctoral degrees while serving. The Air Force had the greatest proportion (53 percent) of officers with advanced degrees, and was the only Service with a greater proportion of officers with advanced degrees than bachelor's degrees. The Marine Corps had fewer officers with advanced degrees than the other Services; the fact that the Navy provides the Marine Corps with health professionals, chaplains, or other such direct appointees, who typically have advanced degrees, is a contributing factor.

Representation within occupations. Table 4.11 presents the distribution of officers across occupational areas, thereby providing some indication of the more specific functional skills demanded of the officer corps. At a glance, the data suggest the need for technical knowledge in addition to more general leadership and management skills demanded of those in tactical operations in which over one-third of officers were working. Together, the second, third, and fourth most populous occupations--health care, engineering and maintenance, and supply--approached the manning levels of tactical operations. Appendix Table B-27 provides FY 1994 occupational area data by Service, including personnel classified as non-occupational.

Representation of women within occupations. Another way to gauge the integration of women in the military and, in particular, the officer corps is by examining their occupational distribution vis-a-vis men. Table 4.11 shows significant assignment differences between male and female officers. Despite expanding numbers of and roles for women, it takes time to bring women into new positions and career fields. As of FY 1994, significantly greater percentages of men than women were in tactical operations (44 and 7 percent, respectively), whereas greater percentages of women than men were in "traditional" female occupations of administration (15 and 5 percent, respectively) and health care (47 and 14 percent, respectively). Appendix Table B-28 shows the assignment patterns by gender and Service.

Table 4.11. Occupational Areas of Active Component Officer Corps by Gender, FY 1994 (Percent)			
Occupational Areas	Males	Females	Total
General Officers and Executives	0.5	*	0.4
Tactical Operations	44.0	7.3	39.0
Intelligence	4.8	5.6	4.9
Engineering and Maintenance	12.4	9.9	12.1
Scientists and Professionals	4.9	4.3	4.8
Health Care	14.1	47.0	18.6
Administration	5.3	15.3	6.6
Supply, Procurement, and Allied Occupations	8.8	8.3	8.7
Non-Occupational**	5.3	2.2	4.9
Total	100.0	100.0	100.0
Calculations exclude 612 male and 8 female Marine Corps and 524 male and 1 female Air Force colonels classified as "General Officers and Executives." Columns may not add to total due to rounding. * Less than one-tenth of one percent. ** Non-occupational includes patients, students, those with unassigned duties, and unknowns. Also see Appendix Table B-28 (Occupational Area by Service and Gender).			

Representation of minorities within occupations. The percentage of each racial/ethnic category by officer occupational areas is shown in Table 4.12. In FY 1994, racial and ethnic groups of officers generally had similar patterns of representation across occupational areas, although fewer Blacks and "Others" were assigned to tactical operations and more Blacks were assigned to administration and supply. The Services have striven to achieve racial/ethnic balance during the assignment process. Such focus is important because occupational assignment is related to promotion opportunities and success as an officer.

Table 4.12. FY 1994 Occupational Area Distribution of Active Component Officer Corps, by Race/Ethnicity (Percent)				
Occupational Areas	White	Black	Hispanic	Other
General Officers and Executives	0.4	0.2	0.2	0.1
Tactical Operations	40.7	27.1	33.9	25.6
Intelligence	4.9	4.2	5.3	4.8
Engineering and Maintenance	11.8	14.5	11.6	12.7
Scientists and Professionals	5.0	4.2	3.7	3.8
Health Care	18.1	19.2	19.6	29.6
Administration	6.2	12.1	7.7	5.9
Supply, Procurement, and Allied Occupations	8.1	15.0	10.4	8.6
Non-Occupational*	4.7	3.6	7.5	9.0
Total	100.0	100.0	100.0	100.0
Calculations exclude 593 White, 18 Black, 7 Hispanic and 2 "Other" Marine Corps and 516 White, 5 Black, 3 Hispanic, and 2 "Other" Air Force officers classified as general officers. Columns may not add to total due to rounding. * Non-occupational includes patients, students, those with unassigned duties, and unknowns. Also see Appendix Table B-29 (Occupational Area by Service and Race/Ethnicity).				

Greater percentages of officers in the "Other" racial category than Whites, Blacks, or Hispanics were in health care positions. Larger proportions of Hispanics than Whites were in intelligence, health care, administration, and supply occupations. Proportionately more Blacks than other demographic categories were in the engineering, supply, and administration occupations.

Regardless of race/ethnicity, the largest percentage of officers worked in tactical operations; the lowest percentages (excluding General Officers) worked in intelligence and scientific/professional occupations. Appendix Table B-29 provides data on occupational areas by Service and race/ethnicity.

Warrant Officers⁹

Warrant officers comprise a group previously omitted from analysis within the *Population Representation* report. They serve in the Army, Navy, and Marine Corps primarily as technicians and specialists typically without command responsibilities.^{10,11} The status and duties of these experts, trainers, and specialty managers have grown and otherwise changed since their grades were established around 1920. Today, they can be found advancing within military careers such as pilot and navigator, physicians assistant, nuclear weapons, and administration. Their systems expertise and supervisory abilities are complementary to both more junior enlisted personnel and the more broadly trained commissioned officers.

Although some warrant officers may enter directly from civilian life (e.g. helicopter pilots) most warrant officers previously were in the upper enlisted ranks. When combined with commissioned officers, warrants account for 8 percent of active duty officer accessions and 7 percent of the officer corps. That is, 1,363 new warrant officers were added to the force in FY 1994 for an overall total of 17,159 on active duty. They are overwhelmingly male (95 percent) but have more "generous" minority representation levels than commissioned officers. Blacks, in particular, have higher representation among warrant officers, accounting for 11 percent of active duty warrant officers (in contrast to 7 percent of commissioned officers). Appendix Tables B-32 and B-33 provide of glimpse of warrant officer accessions and the entire corps of warrant officers on active duty by gender and race/ethnicity.

⁹ For more detailed information on warrant officers, see Department of Defense, *DoD Report on the "Warrant Officer Management Act" (WOMA)* (Washington, DC: Author, 1989).

¹⁰ Upper-level warrant officers however frequently function in foreman-type roles within their system specialties.

¹¹ The Air Force discontinued its warrant officer program in 1959 and increased promotion opportunities for senior enlisted personnel.

Chapter 5

SELECTED RESERVE ENLISTED ACCESSIONS AND ENLISTED FORCE

The Ready Reserve, with an FY 1994 strength of nearly 1.78 million, is the major source of manpower augmentation for the Active force. As illustrated in Figure 5.1, the two principal elements of the Ready Reserve are the Selected Reserve and the Individual Ready Reserve. Reserve Component data in this report include only the Selected Reserve.

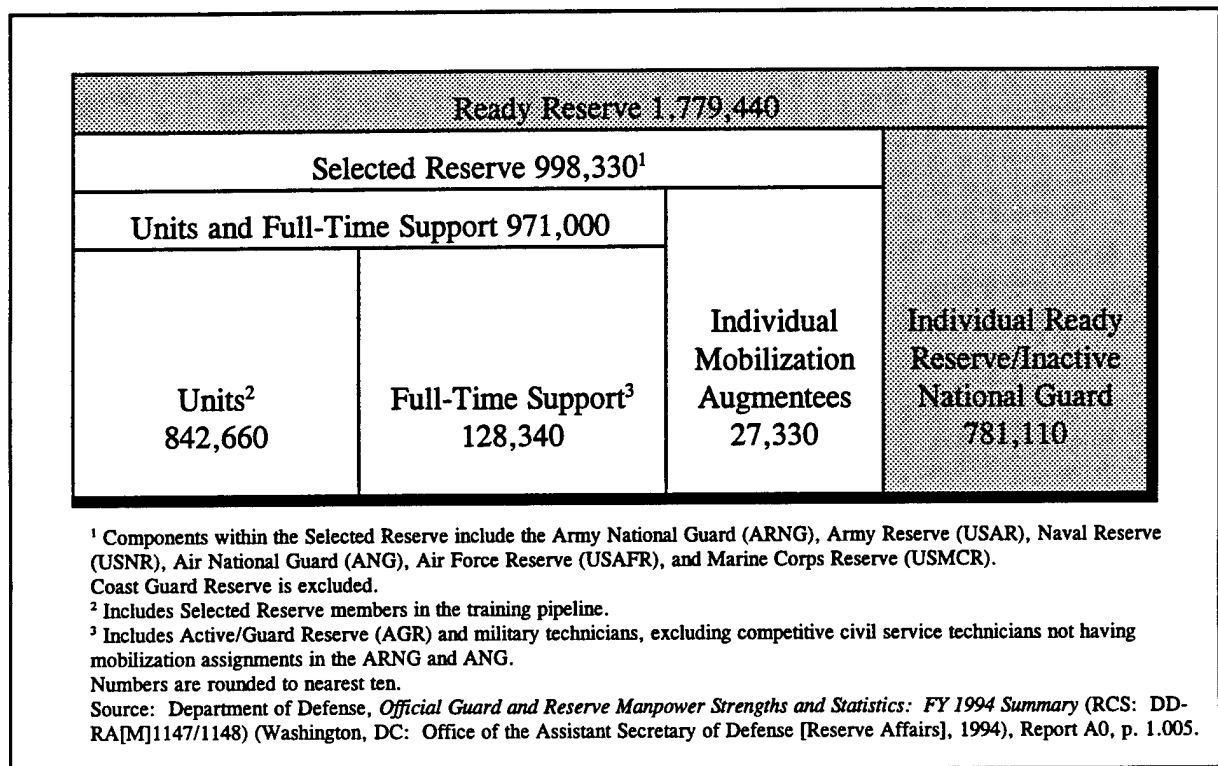

Figure 5.1. FY 1994 composition of the Selected Reserve within the Ready Reserve.

The Selected Reserve includes three types of personnel: 1) those trained in units (including full-time support personnel) who are organized, equipped, and trained to perform wartime missions; 2) trained individuals (Individual Mobilization Augmentees [IMAs]) who provide wartime augmentation on or shortly after mobilization; and 3) those in the training pipeline (including personnel currently on or awaiting initial active duty for training, personnel awaiting second part of initial active duty training, Active Guard/Reserve [AGR] currently on or awaiting initial active duty training, personnel in simultaneous membership program [SMP], and personnel in other training programs).¹ Reservists and Guardsmen in the training pipeline may not deploy.

¹ Department of Defense, *Official Guard and Reserve Manpower Strengths and Statistics: FY 1994 Summary* (RCS: DD-RA(M)1147/1148) (Washington, DC: Office of the Assistant Secretary of Defense [Reserve Affairs], 1994), Appendix C, p. 3.003.

Selected Reservists assigned to units and IMAs train throughout the year. Selected Reserve units may be either operational or augmentation units. Operational units train and deploy as units; augmentation units train as units in peacetime, but are absorbed into Active Component units upon mobilization.

The Selected Reserve Recruiting Process

The recruiting process is similar for the Reserve and Active Components.² With the exception of a number of Air National Guard (ANG) units, Reserve recruiters process their NPS applicants through Military Entrance Processing Stations (MEPSs), following procedures almost identical to the Active Component.

Recruiters provide information on the demands and opportunities of military service, and evaluate prospective recruits to determine eligibility for enlistment. The prospect is asked about his or her age, education, involvement with the law, use of drugs, and physical and medical factors that could preclude enlistment. The prospect may take an enlistment screening test. Non-prior service (NPS) prospects take the ASVAB at either a local test site or at a MEPS. If an NPS applicant achieves qualifying ASVAB scores and wishes to continue the application process, he or she is scheduled for a physical examination and background review at a MEPS. If the applicant's education, ASVAB scores, physical fitness, and moral character qualify for enlistment, he or she meets with a Service classification counselor at a MEPS (or in some instances at an ANG unit) to discuss options for enlistment.

Up to this point, the applicant has made no commitment. The counselor has the record of the applicant's qualifications and computerized information on available training/skill openings, schedules, and enlistment incentives. They discuss the applicant's interests. The counselor may offer bonuses to encourage the applicant to choose hard-to-fill occupational specialties. The applicant, however, is free to accept or reject the offer. Many applicants do not decide immediately, but take time to discuss options with family and friends. When the applicant accepts the offer, he or she signs an enlistment contract and is sworn into the Reserve.

One of the most critical factors in achieving Reserve readiness is the ability to meet Selected Reserve manpower requirements -- in numbers, skills, and quality. Success in meeting recruiting and retention goals varies significantly from unit to unit. First, there are substantial differences in unit size; larger units require greater effort. Second, National Guard and Reserve units differ significantly in skills required. Civilian skill transferability, quality of training, equipment, promotion opportunity, and other factors can create large differences in manning success across skills. Third, National Guard and Reserve units exist in thousands of localities, and each locality presents a unique set of labor market characteristics. The size of the community, distinct demographic and socioeconomic profiles, the mix of skills in the local civilian labor force, local civilian wage levels and hours worked, frequency and duration of employment, employer attitudes regarding National Guard or Reserve duty, attitudes toward the military, effect of recent

² For a description of NPS Selected Reserve recruiting, see Tan, H.W., *Non-prior Service Reserve Enlistments: Supply Estimates and Forecasts* (Santa Monica, CA: RAND Corporation, 1991).

mobilizations on propensity to enlist, and other secondary job opportunities create recruiting and retention challenges for Selected Reserve units.

The diversity of mission and force structure among the Reserve Components affects the demographic composition of units. A National Guard or Reserve company with a combat mission may need a significantly higher proportion of young NPS accessions. Conversely, combat service support functions may require more experienced personnel and thus have greater proportions of prior service recruiting requirements.

The population representation profile of the Reserve Forces is different from the Active Component due to a number of factors:

- The proportional distribution of combat, combat support, and combat service support skills in the Selected Reserve;
- The location of units, given the requirement for Reserve Components to recruit for local unit vacancies within a 50-mile radius; and
- The impact of the Active Component's force structure on National Guard and Reserve recruiting.

This chapter provides demographic characteristics and the distribution of FY 1994 enlisted accessions and the enlisted force of the Selected Reserve. Characteristics of Selected Reserve NPS accessions are given and, where applicable, are compared to prior service accessions. Characteristics and distribution of Selected Reserve officer accessions and the officer corps are contained in Chapter 6.

Characteristics of Selected Reserve Accessions

FY 1994 Reserve Component recruiting results for NPS and prior service gains and assigned end-strengths are shown in Table 5.1. In FY 1994, the Reserve Component recruited 154,228 enlisted persons compared to the Active Component's 176,409. The largest Reserve Component recruiting program is that of the Army National Guard (ARNG). While the ARNG NPS recruiting mission is more than 24,000, prior service requirements are nearly 37,000. Recognizing the importance of the experience provided by prior service personnel to the Reserve Forces, Congress established floors for the non-prior/prior service mix for the Army National Guard: "By September 30, 1997, 65 percent of all [ARNG] officers and 50 percent of all [ARNG] enlisted members should have at least two years of active duty."³ These requirements are being considered for the other components.

Selected Reserve recruiting objectives continued to decrease, dropping 8 percent from FY 1993 to FY 1994 (from 168,000 to 154,000). The Naval Reserve (USNR) experienced the deepest cuts, from 26,000 accessions in FY 1993 to 19,000 in FY 1994, losing one-quarter of its

³ National Defense Authorization Act of Fiscal Year 1992, House Report 102-966, p. 231.

recruit cohort. The Marine Corps Reserve (USMCR) accessed more NPS recruits and fewer prior service recruits, for a small gain in new enlistees in FY 1994 (2 percent increase). Due to differences in mission and force structure, the size of the recruiting missions by component varied greatly. Therefore, comparisons between the Reserve Component percentages must be interpreted with care. The Army components, the ARNG and Army Reserve (USAR), had the largest Selected Reserve recruiting missions, recruiting 72 percent of total Reserve Component accessions (40 and 32 percent for the ARNG and USAR, respectively) in FY 1994.

Table 5.1. FY 1994 Selected Reserve Non-Prior Service (NPS) and Prior Service Enlisted Accessions and End-Strengths					
Component	Enlisted Accessions				Enlisted End-Strength
	Non-Prior Service	Prior Service	Total	Prior Service Percent of Component Total	
Army National Guard	24,217	36,905	61,122	60.4	351,390
Army Reserve	18,552	30,571	49,123	62.2	206,849
Naval Reserve	3,994	15,116	19,110	79.1	86,300
USMC Reserve	5,646	2,729	8,375	32.6	36,860
Air National Guard	2,433	5,302	7,735	68.6	99,711
Air Force Reserve	891	7,872	8,763	89.8	63,411
DoD Total	55,733	98,495	154,228	63.9	844,521
Also see Appendix Tables C-1 (NPS Age by Component and Gender) and C-9 (Prior Service Age by Component and Gender).					

The Air Force Reserve (USAFR) had the highest proportion of prior service recruits (90 percent of its total recruiting effort), followed by the USNR with 79 percent prior service accessions. The USMCR recruited the lowest proportion (33 percent). Prior service accessions provide the Reserve Component with a more experienced personnel base, contributing to increased readiness to meet future missions.

The increase in availability of prior service recruits is a temporary phenomenon due to the larger number of active duty members leaving service. The drawdown of the active force will ultimately reduce the number of prior service individuals from which the Reserve Component can recruit. The numerical effects of the drawdown coupled with changes in the Reserve mission and increased combat risks may lead to difficulties in Reserve recruiting. "Future reserve recruits are likely to consider [the] risk, the costs and benefits associated with [serving], and the likelihood that security threats in the future will differ from those in the past."⁴ A decision to join the

⁴ See Asch, B.J., *Reserve Supply in the Post-Desert Storm Recruiting Environment* (Santa Monica, CA: RAND Corporation, 1993), p. 5.

reserves tomorrow will involve more tradeoffs than in the past. "[P]atriotic duty, combat risk, family hardships, and financial losses during a mobilization, are likely to become more important in the reserve participation decision in the 1990s."⁵

Age. More than two-thirds of ARNG and USAR NPS recruits were 17 to 19 years old, as shown in Table 5.2. More than half of the USMCR and ANG and more than 40 percent of USAFR NPS recruits were 17 to 19 years old. USNR NPS accessions were older, with less than 30 percent 17 to 19 years old and more than 30 percent 25 years old and older.

A number of factors contribute to age differences among Reserve Components, including the size of the recruiting mission and the incentives used by recruiters. ARNG and USAR recruiters work extensively with the high school population because of the size of their respective NPS recruiting missions. Although the high school senior market is their primary target, recruiters use the split training option as an important incentive. This option allows high school juniors to enlist and attend basic training after their junior year of high school, and then enter skill training a year later upon graduating from high school. In FY 1994, 45 and 41 percent, respectively, of ARNG and USAR NPS recruits were students still enrolled in high school.

⁵ Ibid, p. 1.

Race/ethnicity. Table 5.3 shows some significant differences in the racial composition of Selected Reserve NPS and prior service accessions in comparison with FY 1993, but the interpretation is somewhat clouded by the absence of certain data. Due to a large number of USAR recruit records with unknown race and ethnicity, 27 percent of FY 1994 USAR accessions are included in the "Other" race category.⁶ These data affect the total DoD percentages. Compared to FY 1993, percentages of Whites were smaller, Blacks and Hispanics were about the same, and there were more of "Other" races. The percentages of Hispanic NPS recruits increased

in all components except USAR and ANG. The USMCR showed the greatest jump (2.5 percentage points).

The percentages for Blacks were higher than in the civilian youth and labor force. Blacks comprised approximately 16 percent of Selected Reserve NPS FY 1994 accessions compared to 14 percent in the 18- to 24-year-old youth population. However, the proportions of Black recruits in each Reserve Component are quite different. The ANG and USMCR recruited a smaller proportion of NPS Blacks (9 and 11 percent, respectively); the USAR and USAFR recruited the highest proportions (20 and 24 percent, respectively); the ARNG and USNR recruited comparable proportions (16 and 14 percent, respectively).

The proportion of Hispanic Selected Reserve NPS recruits was lower than the national population proportion (8 versus 13 percent). The USMCR had the highest proportion of Hispanic NPS recruits (13 percent). The proportion of Hispanic NPS recruits in the USAFR, ANG, and USAR was much lower than the proportion of 18- to 24-year-old Hispanic youth in the national population (4, 6, and 6 percent, respectively, compared to 13 percent in the national population).

Hispanics represented 6 percent of prior service accessions. The civilian comparison group for prior service accessions, the 20- to 39-year-old civilian labor force, contains 11 percent Hispanics, so the proportion of Hispanic prior service accessions was lower than in the national population. However, prior service accessions are constrained by the proportions of ethnic groups in the Active Component. Therefore, comparisons between prior service recruits and the national population should be interpreted cautiously.

Black females represented the largest proportion of minority Reserve accessions (see Appendix Tables C-3 and C-11). Across the Reserve Components, the proportion of Black women (27 percent for NPS and 30 percent for prior service) was nearly twice that of Black men (14 and 17 percent for NPS and prior service, respectively). The USAR had the highest proportion of Black female recruits (30 percent for NPS and 34 percent for prior service).

Gender. The proportion of women joining the Selected Reserve was similar to the Active Component (approximately 16 percent in both). Table 5.4 reflects the gender percentages for NPS and prior service accessions by component. The USAR and USAFR had the highest proportion of female accessions in the Selected Reserve (23 and 22 percent, respectively), while the USMCR had the lowest (3 percent). With the exception of the USMCR, the proportion of prior service female recruits was lower than NPS female recruits.

Education. More Selected Reserve NPS recruits completed high school than was the case for their civilian peers, as indicated in Table 5.5. Approximately 99 percent of FY 1994 Selected Reserve NPS accessions were in Tiers 1 (high school graduates) and 2 (alternative credentials), compared to 80 percent of 18- to 24-year-old civilians. Differences between Reserve Components in FY 1994 high school graduate NPS recruits were generally quite small. The USAFR and USMCR had the highest proportions of Tier 1 NPS accessions (98 and 97 percent, respectively). The ARNG had the highest proportion of Tier 2 recruits (15 percent compared to 1 to 6 percent for the other components).

Table 5.4. FY 1994 Selected Reserve Non-Prior Service and Prior Service Accessions by Gender (Percent)

Component	Non-Prior Service		Prior Service		Total

Columns may not add to total due to rounding. * Less than one-tenth of one percent. Also see Appendix Tables C-5 (AFQT by Component and Gender) and C-6 (AFQT by Component and Race/Ethnicity). ¹ Data were not available for this report. ² DoD data do not include the Naval Reserve. ³ The 1980 civilian comparison group distribution for the total population (males and females) is 7 percent in Category I, 28 percent in Category II, 15 percent in Category IIIA, 19 percent in Category IIIB, 21 percent in Category IV, and 10 percent in Category V. Source: Civilian data from the <i>Profile of American Youth</i> (Washington, DC: Office of the Assistant Secretary of Defense [Manpower, Reserve Affairs, and Logistics], 1982).								

The percentage of Reserve male recruits who scored in AFQT Categories I to IIIA was greater than for their civilian counterparts (65 versus 54 percent). Seventy-four to 84 percent of USAR, USMCR, ANG, and USAFR NPS male accessions and 55 percent of ARNG NPS male recruits scored in AFQT Categories I through IIIA, compared to 54 percent in the civilian group. The differences between scores of female recruits and their comparable civilian group were similar to male accessions. The proportion of ARNG female NPS accessions scoring in the I-III range decreased from 60 percent in FY 1993 to 54 percent in FY 1994.

Characteristics of the Selected Reserve Enlisted Force

Reserve Component forces perform a variety of important missions in the event of national emergency, and assist the Active Components in meeting their peacetime operating requirements. Figure 5.2 shows the Selected Reserve enlisted end-strengths for FYs 1974 to 1994.

Figure 5.2. Reserve Component enlisted end-strength, FYs 1974-1994.

Age. Substantive differences exist among the Reserve Components in the proportion of enlisted members in various age groups, as shown in Table 5.7. The Air Force Reserve Components (ANG and USAFR) have the "oldest" members -- with 34 and 32 percent, respectively, of enlisted members 40 years of age or older. These proportions are strikingly different from the Active Components and other Reserve Components. For example, only 3 percent of USMCR enlisted members are 40 or older.

Table 5.7. FY 1994 Selected Reserve Enlisted Members, by Age and Component, and Civilian Labor Force Over 16 Years Old (Percent)								
Age Group	Army National Guard	Army Reserve	Naval Reserve	Marine Corps Reserve	Air National Guard	Air Force Reserve	Total DoD	Civilians
17-19	7.3	9.7	1.7	11.7	1.7	0.7	6.3	4.4
20-24	24.8	25.7	17.7	54.0	12.8	9.7	23.0	10.7

35-39	10.8	10.6	16.1	3.4	13.7	16.2	11.7	14.3
40-44	8.6	8.1	11.3	1.6	12.5	12.4	9.2	13.1
45-49	8.1	7.6	7.1	1.3	12.3	11.4	8.3	11.0
50+	5.4	4.6	4.4	0.4	8.9	7.7	5.5	20.0
Unknown	*	0.2	0.2	*	0.0	0.0	0.1	0.0
Total	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0
Columns may not add to total due to rounding. * Less than one-tenth of one percent. Also see Appendix Table C-15 (Age by Component and Gender). Source: Civilian data from Bureau of Labor Statistics Current Population Survey File, September 1994.								

Age differences among the Components result from diverse mission requirements and retention. The mission drives the NPS/prior service mix in each of the Reserve Components. For example, the "labor-intensive" requirements of infantry and other ground combat units usually mandate the need for younger individuals, while "equipment-intensive" requirements demand more formal training. Normally, longer training periods result in the Services seeking recruits for longer terms of enlistment or maintaining a force with greater experience. Individuals in equipment-intensive or high-technology fields, such as those found more often in the USNR, ANG, and USAFR, usually are more experienced, and therefore are older.

Race/ethnicity. As shown in Table 5.8, the proportion of minority Servicemembers varies by Reserve Component. The proportion of Blacks is higher than in the comparable civilian group (18 and 12 percent, respectively), but lower than in the Active Component (22 percent). The USAR has the largest proportion of Blacks (27 percent), while the ANG has the lowest (9 percent). The USMCR has the greatest proportion of Hispanic members (11 percent) and the USAR has the greatest proportion of "Other" racial minorities (9 percent). The USAR race/ethnicity data are affected by the large number of FY 1994 accessions with unknown race/ethnicity who are included in the "Other" minorities category.

Substantial gender differences exist in the racial and ethnic composition of Reserve Component members (Appendix Table C-17). While Black males represent 16 percent of the male

enlisted Selected Reserve, Black females represent 30 percent of females. Fifty-five percent of USAR females are minorities: 40 percent Black, 6 percent Hispanic, and 9 percent in the "Other" racial category. Conversely, the ANG has the lowest proportion of minority females (23 percent), compared to 25 percent in the 18- to 49-year-old civilian labor force.

Table 5.8. FY 1994 Selected Reserve Enlisted Members, by Race/Ethnicity, Gender, and Component, and Civilian Labor Force 18-49 Years Old (Percent)

18-49 YEAR-OLD CIVILIAN LABOR FORCE							
White	Black	Hispanic	Other	Total			
75.1	11.5	10.1	3.3	100.0			
Columns may not add to total due to rounding. * The USAR "top-loaded" accession data for the second-half of FY 1994, submitting records with no race/ethnicity data. When race is unknown, it is shown as "Other." Also see Appendix Tables C-17 (Race/Ethnicity by Component and Gender) and C-18 (Ethnicity by Component). Source: Civilian data from Bureau of Labor Statistics Current Population Survey File, September 1994.							

Gender. The proportion of enlisted women is slightly greater in the Selected Reserve than in the Active Component (14 versus 12 percent, respectively). However, as Table 5.9 makes clear, there are differences in the proportion of women among the Reserve Components. The component with the highest proportion of women is the USAR (22 percent), followed by the USAFR (19 percent). The USMCR has the lowest proportion (3 percent), followed by the ARNG (8 percent).

Table 5.9. FY 1994 Selected Reserve Enlisted Members, by Gender and Component, and Civilian Labor Force, 18-49 Years Old (Percent)								
Gender	Army National Guard	Army Reserve	Naval Reserve	Marine Corps Reserve	Air National Guard	Air Force Reserve	Total DoD	18-49 Year-Old Civilians
Males	92.0	78.5	82.9	96.6	85.9	81.2	86.4	53.7
Females	8.0	21.5	17.1	3.4	14.1	18.8	13.6	46.3
Also, see Appendix Table C-15 (Age by Component and Gender). Source: Civilian data from Bureau of Labor Statistics Current Population Survey File, September 1994.								

Marital status. Approximately half of Selected Reserve members are married (Table 5.10). This proportion is lower than for the comparable civilian population (60 percent), and for enlisted members in the Active Component (57 percent). The proportion of married female Selected Reserve members is much lower than the proportion of married female civilians (37 and 57 percent, respectively). This difference is in part explained by the younger age of women enlisted members compared to their civilian counterparts.

Table 5.10. FY 1994 Married Selected Reserve Enlisted Members, by Gender, and Civilian Labor Force Over 16 Years Old (Percent)		
Gender	DoD	Civilian Labor Force 17 Years and Older
Male	53.6	62.5
Female	36.7	56.5
Total	51.3	59.7
Also see Appendix Table C-16 (Age by Marital Status and Gender). Source: Civilian data from Bureau of Labor Statistics Current Population Survey File, September 1994.		

Education. As shown in Table 5.11, 98 percent of FY 1994 Selected Reserve enlisted members have a high school diploma or alternative credential (Tiers 1 and 2), compared to 89 percent of the comparably aged civilian labor force. Comparing Table 5.5 (education levels of Selected Reserve accessions) with Table 5.11 indicates that a significant number of enlisted members gain college experience while in the Selected Reserve (4 percent of NPS accessions versus 14 percent of enlisted members).

Table 5.11. FY 1994 Selected Reserve Enlisted Members, by Education Levels and Component, and Civilian Labor Force 18-49 Years Old (Percent)								
Education Tier	Army National Guard	Army Reserve	Naval Reserve	Marine Corps Reserve	Air National Guard	Air Force Reserve	Total DoD	18-49 Year-Old Civilians*

Also see Appendix Tables C-19 (Educational Tier by Component and Gender) and C-20 (Educational Tier by Component and Race/Ethnicity). Source: Civilian data from Bureau of Labor Statistics Current Population Survey File, September 1994.								

Representation within occupations. The assignment of Reserve Component personnel to occupations is based upon individual qualifications and desires, military requirements, and unit vacancies. The changing missions of the Armed Services, including domestic and international humanitarian efforts, affect personnel assignment. Table 5.12 shows the occupational area distribution of Reserve and Active Components. The differences reflect each Reserve Component's unique mission requirements and force structure.

Some analysts suggest that active duty members affected by the drawdown can keep their military affiliation by transferring to a Reserve Component. Table 5.13 suggests that the occupational distribution among Active and Reserve Components varies and may preclude some direct transfers within the same skill. For example, 15 percent of active Navy enlisted members serve in electronics specialties, but USNR requirements account for only 8 percent of this skill area. On the other hand, only 10 percent of active Navy enlistees serve in administration while 21 percent of the USNR enlistees provide support services. Similar occupational differences are found in each Service component. Some occupational areas may not be able to absorb all transfers, while other areas may have to recruit more NPS individuals to fill unit vacancies.

Table 5.12. Comparison of Reserve and Active Enlisted Occupational Areas in FY 1994 (Percent)			
Occupational Code and Area		Reserve Components	Active Components
0	Infantry, Gun Crews, and Seamanship Specialists	24.1	16.7

* Occupational Area Codes: 0=Infantry, 1=Electronics, 2=Communications, 3=Medical, 4=Other Technical, 5=Administration, 6=Electrical, 7=Craftsmen, 8=Supply, 9=Non-occupational.										

Representation of minorities within occupations. As shown in Table 5.14, the greatest percentages of Whites, Hispanics, and "Other" racial groups in the Selected Reserve are in combat occupations (25, 25, and 21 percent, respectively). The largest percentages of Blacks are in functional support and administration (23 percent).

Table 5.14. FY 1994 Occupational Areas of Selected Reserve Enlisted Personnel Within Race/Ethnicity (Percent)					
Occupational Code and Area		White	Black	Hispanic	Other
0	Infantry, Gun Crews, and Seamanship Specialists	24.9	21.8	24.8	20.5
1	Electronic Equipment Repairers	4.2	2.3	3.0	3.9
2	Communications and Intelligence Specialists	5.9	4.8	5.0	5.3
3	Medical and Dental Specialists	6.6	8.8	7.8	9.8
4	Other Allied Specialists	3.0	2.4	2.5	2.4
5	Functional Support and Administration	14.5	22.9	15.2	19.6
6	Electrical/Mechanical Equipment Repairers	17.8	12.6	16.8	15.6
7	Craftsmen	6.4	4.3	5.2	5.8
8	Service and Supply Handlers	9.3	13.8	11.6	11.0
9	Non-occupational*	7.5	6.5	8.2	6.3
Total		100.0	100.0	100.0	100.0
Columns may not add to total due to rounding.					
* Non-occupational includes patients, students, those with unassigned duties and unknowns.					
Also see Appendix Table C-22 (Occupational Area by Component and Race/Ethnicity).					

Representation of women within occupations. The assignment patterns for Selected Reserve enlisted men and women in occupational areas are reflected in Table 5.15. Most National Guard and Reserve enlisted women are assigned to two occupational areas: functional support (41 percent) and medical (18 percent). Enlisted men are assigned primarily to infantry (27 percent) and electrical/mechanical equipment repair (19 percent).

The proportion of women in technical and craftsmen occupations is relatively low, as illustrated in Table 5.15. Women are three times more likely than men to serve in medical and administrative areas. Because of the proportions of prior service accessions to the Selected Reserve, changes to the distribution of women among Selected Reserve occupations will depend to a considerable extent on the occupational preferences of female accessions; the number of Active Component women in "non-traditional" skills and their willingness to join a Selected Reserve unit upon separating from active duty; and the proportion of technical skill unit vacancies.

The April 1993 policy⁷ to open more specialties and assignments to women resulted in significant new opportunities for women in both the Active and Reserve components. Comparisons between FY 1992 and 1994 already show changes in the proportion of women serving in infantry, gun crew, and seamanship specialties, from 3.7 to 8.9 percent. While the distribution of women is beginning to reflect the new policy, it will be several years before its full effects are realized in the Reserve distributions.

Table 5.15. FY 1994 Occupational Areas of Selected Reserve Enlisted Personnel by Gender (Percent)			
Occupational Code and Area		Males	Females
0	Infantry, Gun Crews, and Seamanship Specialists	26.5	8.9

⁷ Memorandum from Les Aspin, Secretary of Defense, Subject: Policy on the Assignment of Women in the Armed Forces, April 28, 1993.

Chapter 6

SELECTED RESERVE OFFICER ACCESSIONS AND OFFICER CORPS

This chapter describes demographic characteristics of Selected Reserve officer accessions and commissioned officers in FY 1994.¹ The force drawdown continued in FY 1994 but most of the force reductions in the Reserve Components have involved enlisted members. However, the FY 1994 officer corps is 6 percent smaller than the FY 1993 corps (139,945 and 149,430, respectively). While the USNR lost 22 percent of its FY 1993 strength, the USMCR and USAFR experienced slight gains in officer strength. On the whole, however, the Selected Reserve officer corps of FY 1994 looks similar to the officers of FY 1993. Figure 6.1 shows the Reserve Component officer corps end-strengths for FYs 1974 to 1994.

Figure 6.1. Reserve Component officer corps end-strength, FYs 1974-1994.

¹ Data are for commissioned officers; warrant officers are excluded. A brief look at Reserve Component warrant officers is provided in Appendix Tables C-34 and C-35.

Table 6.1 compares the number and proportion of Reserve officer accessions with the officer corps. The largest proportion of Selected Reserve officers serve in the ARNG and the USAR. The two Army Reserve Components comprise 55 percent of Reserve officer accessions and 61 percent of Reserve officer strength.

Table 6.1. FY 1994 Selected Reserve Officer Accessions and Officer Corps End-Strength (Number and Percent)				
Component	Officer Accessions		Officer Corps End-Strength	
	Number	Percent	Number	Percent
Army National Guard	3,200	22.0	36,686	26.2
Army Reserve	4,814	33.1	48,800	34.9
Naval Reserve	2,861	19.7	21,021	15.0
USMC Reserve	691	4.8	3,352	2.4
Air National Guard	809	5.6	13,876	9.9
Air Force Reserve	2,182	15.0	16,210	11.6
Total	14,557	100.0	139,945	100.0
Also see Appendix Tables C-23 (Officer Accessions by Age and Component) and C-24 (Officers by Age and Component).				

Characteristics of Selected Reserve Officer Accessions and Officer Corps

Age. The differing missions and force structures of the Reserve Components affect the age composition of officers as shown in Figure 6.2. The USAR and USAFR have the largest proportions of officers aged 40 and older (53 percent, each). Conversely, the ARNG and USMCR have the smallest proportions of officers 40 or older (33 and 32 percent, respectively). The ARNG and USAR have the greatest proportions of officers aged 29 and younger (27 and 13 percent, respectively).

Recruiting policies affect the age structure of the Selected Reserve officer corps. One might expect the USMCR to have a greater proportion of younger officers than the other Reserve Components. However, this is not the case. Its policy to recruit only officers with prior military service increases the age of its officers.

Race/ethnicity. The percentages of FY 1994 Selected Reserve officer accessions and officer corps by race/ethnicity are shown in Table 6.2. The proportions of Black and Hispanic officer accessions in the Selected Reserve are comparable to the proportions in the Active Components (Blacks: Active - 7 percent, Reserve - 8 percent; Hispanics: Active - 4 percent, Reserve - 3 percent).

Figure 6.2. Percent of Selected Reserve officer corps by age group, FY 1994.

The Army Components of the Selected Reserve have the highest proportions of Black officers, while the USNR has the lowest. The Reserve Components differ in the proportion of officers with Hispanic backgrounds. The ARNG has the largest proportion of Hispanic officers (4 percent), the USNR the smallest (2 percent). Hispanics comprise approximately 3 percent of the officer corps in each of the other Reserve Components.

Gender. Women comprise 20 percent of Selected Reserve officer accessions and 17 percent of the Selected Reserve officer corps, as shown in Table 6.3. The proportion of Selected Reserve female officer accessions is identical to that of the Active Component (each 19 percent). However, the proportion of women in the Selected Reserve officer corps is larger than in the Active Component (16 and 13 percent, respectively).

The impact of force structure and mission diversity is again reflected in the distribution of women officers among the Reserve Components. The proportion of female officers in the USMCR is 5 percent, while 23 percent of USAR and USAFR officers are females. Reasons for this divergence are discussed in the portion of this chapter dealing with the occupational assignment of officers.

Table 6.2. FY 1994 Selected Reserve Officer Accessions and Officer Corps, by Race/Ethnicity (Percent)					
Component	White	Black	Hispanic	Other	Total
SELECTED RESERVE OFFICER ACCESSIONS					
Army National Guard	84.3	8.5	4.0	3.2	100.0
Army Reserve	76.1	11.8	3.2	9.0	100.0
Naval Reserve	82.3	3.2	1.4	13.1	100.0
USMC Reserve	90.3	5.1	2.0	2.6	100.0
Air National Guard	86.0	7.3	2.7	4.0	100.0
Air Force Reserve	87.9	5.4	2.7	4.0	100.0
Total DoD	82.1	7.9	2.8	7.2	100.0
SELECTED RESERVE OFFICER CORPS					
Army National Guard	86.5	7.3	3.9	2.3	100.0
Army Reserve	80.7	12.1	2.9	4.3	100.0
Naval Reserve	89.1	3.2	1.4	6.4	100.0
USMC Reserve	91.9	4.5	2.2	1.5	100.0
Air National Guard	91.0	4.2	2.6	2.3	100.0

Total DoD	85.9	7.7	2.8	3.6	100.0
Rows may not add to total due to rounding. Also see Appendix Table C-27 (Race/Ethnicity by Component).					

Table 6.3. FY 1994 Selected Reserve Female Officer Accessions and Officer Corps (Percent)							
	Army National Guard	Army Reserve	Naval Reserve	USMC Reserve	Air National Guard	Air Force Reserve	DoD Total
Officer Accessions	10.1	26.8	18.7	5.9	19.5	26.7	20.1
Officer Corps	9.1	23.0	16.5	5.3	11.9	23.1	16.9
Also see Appendix Table C-25 (Gender by Component).							

Marital status. In FY 1994, the proportion of Selected Reserve officer accessions and officers who were married was higher than for enlisted members (Table 6.4). Like the Active Component, more males were married than females. As detailed in Appendix Table C-26, the proportion of married male Selected Reserve officers (73 percent) is slightly larger than the proportion of the male civilian college graduate labor force who are married (68 percent).

However, the proportion of married female Selected Reserve officers (54 percent) is lower than for their comparable female civilian college graduate labor force (66 percent).

Table 6.4. FY 1994 Married Selected Reserve Officers and Enlisted Members, by Gender, and Civilians (Percent)						
Gender	Officer Accessions	21-35 Year-Old Civilian College Graduates	Officer Corps	Civilian College Graduates in the Work Force	Enlisted	Civilian Labor Force, 17 Years and Older
Males	62.0	50.7	76.7	70.5	53.6	62.5
Females	46.9	54.6	54.4	66.0	36.7	56.5
Total	59.0	52.7	72.9	68.3	51.3	59.7
Also see Appendix Tables C-16 (Enlisted Members by Age, Marital Status, and Gender) and C-26 (Officers by Gender, Marital Status, and Component). Source: Civilian data from Bureau of Labor Statistics Current Population Survey File, September 1994.						

Source of commission. Each Reserve Component applies its own selection procedures for officer candidates. Many officer accessions who transfer from an Active Component already possess at least a college degree. Officer candidates who do not possess a degree undergo rigorous selection procedures, and must successfully complete an officer candidate or training school. For example, in FY 1994, 28 percent of ARNG officer accessions received their commissions through the ARNG Officer Candidate Schools (OCS) located in each state and territory; 36 percent of ANG officer accessions were commissioned through its Academy of Military Science (AMS) located in Tennessee (Table 6.5).

Table 6.5. FY 1994 Source of Commission of Selected Reserve Officer Accessions (Percent)							
Source of Commission	Army National Guard	Army Reserve	Naval Reserve	USMC Reserve	Air National Guard	Air Force Reserve	DoD Total
Academy	2.0	3.0	8.9	4.1	6.2	6.1	4.6
ROTC- Scholarship	6.2	6.5	12.4	0.0	3.2	11.6	7.9
ROTC- No Scholarship	36.6	18.3	3.2	10.7	15.2	19.5	19.0
OCS/OTS/PLC	7.6	4.2	21.4	85.2	11.4	20.3	15.0
ANG AMS/ARNG OCS	27.9	2.6	0.0	0.0	36.0	1.7	9.2
Direct Appointment	17.5	23.8	44.6	0.0	26.3	40.6	28.0
Other	1.2	3.8	4.2	0.0	1.7	0.4	2.5
Unknown	1.1	37.9	5.2	0.0	0.0	0.0	13.8
Total	100.0	100.0	100.0	100.0	100.0	100.0	100.0
Columns may not add to total due to rounding. Also see Appendix Table C-33 (Officers by Source of Commission and Component).							

The variance among the Reserve Components in the sources of commission is shown in Table 6.5. In the USNR, ANG, and USAFR, the largest source of commissions was through direct appointments. The overwhelming majority of USMCR officer accessions (85 percent) obtained their commissions through OCS or the Marine Corps Platoon Leader Class (PLC). PLC is a split-training program where candidates normally attend officer training in the summers after their junior and senior years of college. The Army's components rely heavily on the Reserve Officers Training Corps (ROTC), primarily without scholarships. Forty-three and 25 percent of the FY 1994 ARNG and USAR officer accessions, respectively, received their commissions from the ROTC program. A small number of officer accessions are commissioned from other programs, primarily through the aviation cadet and aviation training programs.²

Education. Significant variance is evident (Table 6.6) in the educational attainment of FY 1994 Reserve officer accessions and the officer corps. Eighty-five percent of officer accessions were college graduates. The ARNG has shown a 9-percentage-point improvement in college

Table 6.6. FY 1994 Educational Attainment of Selected Reserve Officer Accessions and Officer Corps (Percent)							
Educational Attainment*	Army National Guard	Army Reserve	Naval Reserve	USMC Reserve	Air National Guard	Air Force Reserve	DoD Total

Advanced Degree (M.A., Ph.D., etc.)	17.6	31.7	37.0	27.2	28.5	46.8	29.9
Total	100.0	100.0	100.0	100.0	100.0	100.0	100.0
Columns may not add to total due to rounding. * Excludes unknowns. Also see Appendix Table C-28 (Education by Component).							

² For Reserve Component commissioned officer accessions, "other" sources of commission are defined as: Merchant Marine Academy, Aviation Cadet, and Aviation Training Program.

graduates since FY 1993. The USNR had the highest proportion of officer accessions with at least a college degree (99.9 percent).

The proportion of Reserve Component officers with at least an undergraduate degree is slightly higher than that of its officer accessions, particularly for the ANG. While 76 percent of ANG officer accessions have a college degree, the proportion of officers with college credentials increases to 92 percent.

Several reasons help explain why more officers have college degrees than do officer accessions. A number of Selected Reserve accessions have college credits but have not yet earned a degree when they join the Selected Reserve. Because of Service emphasis on an educated officer corps, many individuals join to take advantage of educational opportunities and education financing (e.g., the Montgomery G.I. Bill), and many non-degreed officers complete their college education while serving in the Selected Reserve.

Representation within occupations. The distribution of officers across occupational areas is shown in Table 6.7 for both the Active and Reserve Components. The largest proportions of Reserve Component officers (56 percent) and Active Component officers (58 percent) are assigned to tactical operations and health care positions. However, due to assigned missions, the Reserve Components have a smaller proportion than the Active Components in tactical operations (35 and 39 percent, respectively), but a greater proportion of officers in health care (21 and 19 percent, respectively).

Table 6.7. FY 1994 Occupational Areas of Active and Selected Reserve Officer Corps (Percent)		
Occupational Area	Active Components	Reserve Components
General Officers and Executives	0.4	0.4
Tactical Operations	39.0	34.5
Intelligence	4.9	5.1
Engineering and Maintenance	12.1	10.5
Scientists and Professionals	4.8	5.4
Health Care	18.6	21.3
Administration	6.7	8.7
Supply, Procurement, and Allied Occupations	8.7	9.5
Non-Occupational*	4.9	4.6
Total	100.0	100.0
Columns may not add to total due to rounding.		
* Non-occupational includes patients, students, those with unassigned duties, and unknowns.		
Also see Appendix Tables C-30 (Occupational Area by Component) and B-27 (Occupational Area by Service).		

Differences in occupational assignment among the Reserve Components are shown in Table 6.8. With the exception of USAR, the largest proportion of officers in each component is in tactical operations. The ARNG and USMCR have the greatest proportions of officers in tactical operations (49 and 56 percent, respectively). The USAR and USAFR have the smallest proportions of officers in tactical operations (24 and 28 percent, respectively).

Many Selected Reserve officers are health care professionals. The USAR has the greatest proportion of officers in health care occupations (31 percent). Health care comprises the second largest percentage of officers in the ARNG, USNR, and USAFR (11, 21, and 27 percent, respectively). Fourteen percent of ANG officers are assigned to health care positions.

Table 6.8. Comparison of FY 1994 Occupational Area Distribution of Officers by Active and Reserve Component (Percent)									
Active and Reserve Components	Occupational Area*								
	0	1	2	3	4	5	6	7	8
ARMY									
Active Component	0.5	38.9	6.9	9.8	3.9	22.5	6.1	10.2	1.3

Representation of women within occupations. The occupational assignments by gender of Selected Reserve officers are shown in Table 6.9. More than half (57 percent) of all female officers are assigned to health care positions and 14 percent to administration positions. As indicated in Appendix Table C-31, the assignment of women into officer occupational areas differs by component. Across the components, 57 percent of female officers serve in health care positions, ranging from 36 percent in the ARNG to 65 percent in the USAR. One percent of USAR female officers hold tactical operations positions compared to 8 percent in the ANG. As

in the Selected Reserve enlisted force, reasons for this distribution include the differing missions of each component; the occupational preferences of female officers; the number of Active Component female officers possessing such skills who join a Selected Reserve unit after separation from active duty; the proportion of technical skill unit vacancies; and direct ground combat exclusion policies.

Table 6.9 FY 1994 Occupational Areas of Selected Reserve Officer Corps, by Gender (Percent)			
Occupational Area	Male	Female	Total
General Officers and Executives	0.5	*	0.4
Tactical Operations	40.9	3.3	34.5
Intelligence	5.2	4.7	5.1

Supply, Procurement, and Allied Occupations	9.7	8.9	9.5
Non-Occupational**	4.8	3.4	4.6
Total	100.0	100.0	100.0
Columns may not add to total due to rounding.			
* Less than one-tenth of one percent.			
** Non-occupational includes patients, students, those with unassigned duties, and unknowns.			
Also see Appendix Table C-31 (Occupational Area by Component and Gender).			

Representation of minorities within occupations. An overview of the distribution of Selected Reserve officers by race/ethnicity is provided in Table 6.10. More than half of Whites, Hispanics, and "Others" serve in either tactical operations or health care occupations. The largest proportions of White and Hispanic officers are in tactical operations (36 and 32 percent, respectively); the largest percentages of Black and "Other" racial category officers are in health care occupations (28 and 32 percent, respectively).

As detailed in Appendix Table C-32, there are race/ethnicity differences among Reserve Components by occupational areas. In tactical operations, the greatest differences are in the ANG (43 percent of Whites compared to 18 percent of Blacks). In the health care occupations, the largest diversity is in the USAFR where 47 percent of "Other" racial categories, 42 percent of Blacks, and 31 percent of Hispanics serve in health care, compared to 25 percent of Whites.

Table 6.10. FY 1994 Occupational Areas of Selected Reserve Officer Corps, by Race/Ethnicity (Percent)

Chapter 7

SOCIOECONOMIC STATUS OF ENLISTED ACCESSIONS

Differing viewpoints on the socioeconomic status of accessions have been the basis for serious debates regarding the viability of the all-volunteer force. While the concern that the volunteer military would recruit primarily from the lower economic and social levels does not appear to be true,¹ it is important to understand the socioeconomic composition of the military. This chapter reviews issues surrounding these aspects of the military and provides data on the social background of FY 1994 recruits.

Socioeconomic Status in Perspective

Imbalances in socioeconomic representation in the military often have been a controversial social and political issue. In debate over the establishment of the volunteer force, opponents argued that it would lead to a military composed of those from poor and minority backgrounds, forced to turn to the military as an employer of last resort. Some critics anticipated that the consequences would be not only inequitable, but dangerous. They argued that by recruiting primarily from an underclass, the volunteer force would create a serious cleavage between the military and the rest of society.²

The belief that the enlisted military drew recruits primarily from lower socioeconomic groups was a major element in proposals for either a return to conscription or some form of national service program that would draw all classes into military or civilian service. The philosophical basis for these proposals was the conviction that all social classes should contribute their share to the national defense. A 1988 report by the Democratic Leadership Council stated, "We cannot ask the poor and under-privileged alone to defend us while our more fortunate sons and daughters take a free ride, forging ahead with their education and careers."³

Many of the assertions about the class composition of the military have been based on impressions and anecdotes rather than on empirical data. Analysis of Vietnam era veterans indicated that individuals of high socioeconomic status comprise about half the proportion of draftees compared to their representation in the overall population.⁴ Three systematic analyses

⁴ Boulanger, G., "Who Goes to War?" in A. Egendorf, C. Kadushin, R.S. Laufer, G. Rothbart, and L. Sloan (Eds.), *Legacies of Vietnam: Comparative Adjustment of Veterans and Their Peers, Vol. 4. Long-term Stress Reactions: Some Causes, Consequences, and Naturally Occurring Support Systems* (Washington, DC: U.S. Government Printing Office, 1981), pp. 494-515.

of the socioeconomic composition of accessions during the volunteer period suggest that little has changed with the all-volunteer force. All found that members of the military tended to come from backgrounds that were somewhat lower in socioeconomic status than the U.S. average, but that the differences between the military and the comparison groups were relatively modest.⁵ These results have been confirmed in recent editions of this report, which portray a socioeconomic composition of enlisted accessions similar to the population as a whole, but with the top quartile of the population underrepresented.⁶ While the socioeconomic status of recruits is slightly lower than the general population, today's recruits have higher levels of education, measured aptitudes, and reading skills than their civilian counterparts.

Operation Desert Shield revived concerns that Blacks would bear a disproportionate share of fighting and dying in future wars. The Chairman of the House Committee on Armed Services stated, "The...Committee spent some considerable time on this [issue] and came to a rather surprising conclusion about it. It's not true."⁷ A related report concluded that the volunteer system provided quality enlistees; that minorities would not bear a much heavier burden of combat; and that a draft would neither be as fair nor produce a force as high in quality as the current system.⁸ The report indicated that a draft would lead to a less educated, less motivated, and less competent force, even though it might be more representative of the upper and lower social strata.

Defining Socioeconomic Status

Although the term "socioeconomic status" is used frequently, there is no general consensus regarding how to define and measure this construct. Often, measures cited in the literature are those of convenience or availability (e.g., race, zip code). In general, socioeconomic status is defined as an indicator of economic and social position.⁹

⁵ See (1) Cooper, R.V.L., *Military Manpower and the All Volunteer Force* (Santa Monica, CA: RAND Corporation, 1977), pp. 223-250; (2) Fredland, J.E. and Little, R.D., *Socioeconomic Characteristics of the All Volunteer Force: Evidence from the National Longitudinal Survey, 1979* (Annapolis, MD: U.S. Naval Academy, 1982); (3) Fernandez, R.L., *Social Representation in the U.S. Military* (Washington, DC: Congressional Budget Office, October 1989).

⁶ See *Population Representation in the Military Services* for fiscal years 1991-1993.

⁹ Stawarski, C.A. and Boesel, D., *Representation in the Military: Socioeconomic Status* (Alexandria, VA: Human Resources Research Organization, 1988).

Research suggests that occupation is the best single indicator of socioeconomic position.¹⁰ However, including additional information, such as education and income, can increase explained variance in the measure of social class. In addition, different items may assess unique dimensions of socioeconomic status, which together may represent the construct more completely.¹¹ The variables traditionally used to assess social standing are education, occupation, and income; additional measures include employment status, possessions, and presence of reading materials in the home.¹²

Measuring Socioeconomic Status

Socioeconomic representation has been included in the annual *Population Representation in the Military Services* since the FY 1986 report. However, there were no reliable socioeconomic data to report at that time. Available data included the zip code of a recruit's current address and associated statistics from census data. While this type of data is useful for demographic trend analysis and advertising and marketing analysis, it is not reliable for comparing socioeconomic representation in the military to that of the general population. For example, applicants and recruits may not come from the background indicated by the zip code for their current address (i.e., these individuals may move away from home to go to college or to work).¹³

The Survey of Recruit Socioeconomic Backgrounds, first administered in March 1989, is currently administered on a continuing basis at recruit training centers. Participants answer questions about their parents' education, employment status, occupation, and home ownership. While income is a widely used measure of socioeconomic status, research provides evidence that recruit-aged youth are not accurate at estimating their parents' income.¹⁴ Thus, home ownership is included as a proxy for income.

Several researchers have devised a summary statistic for socioeconomic status.¹⁵ The socioeconomic index (SEI), derived from predicted prestige scores based on levels of income and education within occupations, is another means of defining socioeconomic status. SEI scores can be calculated using occupational information reported in the survey. In this report, the two most recent index scores are used -- one for the total population and one for the male population.

Each year, the Survey of Recruit Socioeconomic Backgrounds is administered to randomly selected recruits. In FY 1994, the survey was given to both active duty and Reserve Component recruits without prior military experience. Approximately 15,200 active duty and 4,000 Reserve Component enlisted accessions provided information on the marital status, education, employment, and occupation of their parents. The survey requested information on the parents with whom the recruit was last living, whether they were biological parents, stepparents, or other legal guardians. Throughout this discussion, these will be referred to as "recruit or DoD parents."

For civilians, similar information is collected by the Bureau of Census. These measures include marital status, highest level of education, home ownership, employment status, and occupation. For comparison, information is provided for parents of civilian youth between the ages of 14 and 21, inclusive, who were living at home. These data are taken from the Current Population Survey (CPS), an ongoing survey conducted by the Bureau of the Census for the Bureau of Labor Statistics.¹⁶ They will be referred to as "CPS parents."

Comparisons between DoD and CPS parents should be tempered by the fact that the DoD group does not include officer accessions. Since Active Component officer accessions represent nearly 7 percent of total Active Component accessions, adding officer socioeconomic measures could produce a moderate change in the overall DoD results. However, for most of the variables reported in this section, including officer data would produce little change in the reported values, because the civilian and military distributions are quite similar. Specific areas in which adding officer data might change the comparisons will be noted in the following discussion.

Socioeconomic Status of Enlisted Accessions and Civilians

The remainder of this chapter presents the results of the 1994 recruit survey and comparison data from the CPS. These data provide several measures of socioeconomic status, including the SEI scores.

Marital status. About 89 percent of recruit fathers and 73 percent of recruit mothers were married at the time of the recruits' enlistment, as were most of the CPS parents (Table 7.1). Active duty and Reserve Component parents were equally likely to be married. CPS fathers were slightly more likely to be married than fathers of recruits. For both CPS and recruit populations, mothers were less likely to be married than fathers. That is, for both populations, children were more likely to be living with single mothers than with single fathers. Mothers of Air Force recruits were somewhat more likely to be married than mothers of other recruits; in fact, the Air Force mothers were more likely to be married than were CPS mothers.

¹⁶ To facilitate comparison between the military and civilian data sets, the CPS data were weighted to match the military data in terms of age. CPS sample weights were ratio-adjusted to age distributions, in 5-year intervals, of recruits' parents. Consequently, the adjusted CPS data contain the same percentage of parents in a specific gender and age group (e.g., male parents age 40-44) as the military data set. When sample sizes are large, small differences in magnitude can be statistically significant. For comparisons between DoD and CPS parents, any difference greater than about one percentage point is statistically significant; the comparable figure for comparisons between Services or between active duty and Reserve Components is 3 percent.

Table 7.1. Married Parents, by Gender of Parent and Service, of FY 1994 NPS Recruits with Civilian Comparison Group (Percent)								
	Active Component				DoD Subtotal		Total	
Gender of Parent	Army	Navy	Marine Corps	Air Force	Active Duty	Guard/ Reserve	DoD	CPS

Female	72.3	72.8	73.0	77.2	73.4	73.3	73.4	73.9
Source: Civilian data from Bureau of Labor Statistics Current Population Survey File, October 1993 - September 1994.								

Education. CPS parents are somewhat better educated than DoD parents (Table 7.2). CPS fathers are more likely to be college graduates than DoD fathers (29 percent for CPS and 22 percent for DoD), more likely to have at least some college (54 percent vs. 48 percent), and more likely to have graduated from high school (86 percent vs. 83 percent). Differences between the

DoD and CPS mothers are in the same direction, but smaller than the differences between the fathers. Nearly 20 percent of CPS mothers have graduated from college, compared with 17 percent of DoD mothers. Similarly, CPS mothers are more likely to have at least some college (47 percent vs. 44 percent), and more likely to have graduated from high school (85 percent vs. 82 percent) than their DoD counterparts.

The education level most representative of both DoD and CPS parents is high school graduate, encompassing over one-third of fathers and nearly two-fifths of mothers. For both DoD and CPS parents, fathers are somewhat more educated than mothers. A greater proportion of fathers are college graduates (22 percent for DoD and 29 percent for CPS) than mothers (17 percent for DoD and 20 percent for CPS), while fewer fathers (35 percent for DoD and 32 percent for CPS) than mothers (38 percent for both DoD and CPS mothers) have a high school diploma as their highest educational attainment.

There are no significant differences in the education of Active and Reserve Component parents. Within the Active Components, there are several differences among the Services. Fathers of Air Force and Navy recruits tend to have higher levels of education than fathers of the other recruits. They were more likely to have attended college, and less likely to have less than a high school diploma. Specifically, 51 percent of Navy fathers and 53 percent of Air Force fathers have had at least some college; comparable numbers are 46 percent for the Army, and 44 percent for the Marine Corps. The same pattern of results holds for the mothers, but the differences are smaller, and some are too small to be considered significant.

The socioeconomic status of children and adolescents is closely related to mothers' education, fathers' education, average family income, and fathers' occupational status. Analysis of data collected for the Profile of American Youth study showed that mothers' education approximated the effects of all four variables.¹⁷ Thus, the measure of recruit mothers' education becomes important as an indicator of high-quality recruits. Approximately 16 percent of recruit mothers earned a college degree or better; an additional 28 percent accrued some college credits.

Home ownership. The percentage of both CPS mothers and fathers who own homes is higher than for those in the Armed Services (Table 7.3). Although there are no differences between the parents of Active and Reserve Component accessions, within the active duty Service categories both mothers and fathers are more likely to own their home if their child enlisted into the Air Force rather than one of the other Services. CPS parents are less likely than DoD parents to have housing arrangements other than buying or renting. Finally, both DoD and CPS fathers are more likely to own their home than mothers.

Employment status. DoD recruit mothers are slightly more likely to be employed than CPS mothers.¹⁸ Otherwise, employment rates are very similar across Services and components, although a higher percentage of both DoD and CPS fathers are employed than mothers. Table 7.4 reports, by Service, the rates of fathers and mothers who are employed. An explanation of levels of employment, particularly those for fathers, is in order. In the CPS, the civilian labor

Table 7.4. Employed Parents, by Gender and Service, of FY 1994 NPS Recruits with Civilian Comparison Group (Percent)

¹⁸ The recruit survey asks recruits whether the parent is currently working at a paid job, in a business, or on a farm, while the CPS asks whether the individual was employed in the last week. Thus, comparisons of employment rates from the two data sets must be interpreted with caution.

force is defined as all employed and unemployed civilians 16 years and over.¹⁹ Unemployed, however, is limited to those civilians who made a specific effort to find a job within the past four weeks. All other persons are "not in the labor force." For this report, civilian comparison employment computations are based on all parents in the non-institutional population, including those not in the labor force.²⁰ The three employment categories (employed, unemployed, not in the labor force) are included because recruits' parents represent the total population, not just the defined "labor force."

Table 7.5. Parents of FY 1994 Active Component NPS Recruits in Each Occupational Category, by Gender, with Civilian Comparison Group (Percent)

¹⁹ See *Bureau of the Census, Statistical Abstract of the United States: 1992* (Washington, DC: Government Printing Office, 1992), p. 378, for a detailed explanation of labor force employment categories and the component parts of each category.

²⁰ Approximately 7 percent of recruits' fathers, 15 percent of recruits' mothers, 9 percent of CPS fathers, and 25 percent of CPS mothers were reported as "not in the labor force."

Occupation.²¹ Table 7.5 compares the occupations of recruit and CPS parents. These data show that recruit fathers and mothers are underrepresented in executive and management occupations, and in professional occupations. Recruit fathers are also underrepresented in sales occupations. There are no significant differences in the occupations of Active and Reserve Component parents. Including data from officer accessions, if it were available, could raise the representation of executive and professional occupations within DoD, reducing the discrepancy somewhat. However, it is quite unlikely that the addition of officer accession data would eliminate the differences.

DoD parents are overrepresented in a number of craftsmen and blue-collar occupations. Specifically, DoD fathers are more likely than their civilian counterparts to have occupations in protective services; precision production, craft and repair; transportation; and the military.²² DoD mothers are more frequently employed in other service occupations, and as handlers, helpers, and laborers than CPS mothers.

Socioeconomic index scores. Socioeconomic index scores reflecting the education, income, and prestige associated with different occupations were computed from responses to DoD and CPS surveys. Stevens and Cho²³ developed such scores for each 3-digit occupation code in the 1980 Census, revising earlier work by Duncan, and Featherman et al.²⁴ Two sets of scores were developed -- one for the total labor force and one for the male labor force, called the Total Socioeconomic Index (TSEI) and the Male Socioeconomic Index (MSEI), respectively. As there is no female-specific socioeconomic index, TSEI scores are reported for CPS and DoD mothers, while MSEI scores are reported for all fathers. The 1990 Census made several changes in the occupational codes. In order to use the TSEI and MSEI indices, which are based on the 1980 codes, we translated all changed occupational codes to the equivalent values in the earlier coding system.

The occupational data in Table 7.5 show that DoD parents are underrepresented in certain high-prestige occupational categories, such as executive and professional. Socioeconomic index scores summarize the differences in prestige that are associated with occupational differences.

²¹ To determine occupation, recruits provided open-ended descriptions of their parents' jobs. CPS respondents answered similarly about their own primary occupation. The descriptions were manually coded to 3-digit Census occupation codes, which were then collapsed into 13 major Census categories.

²² Differences in the number of parents in the military are due, at least in part, to differences in the way these occupations are coded in the military and civilian surveys. In the CPS data, an occupation is assigned a military code only if the military job cannot be classified in another occupational category. In the DoD data, all parents in the military are assigned a military occupational code.

²³ Stevens, G. and Cho, J.H., "Socioeconomic Indices and the New 1980 Census Occupational Classification Scheme," *Social Science Research*, 14 (1985), pp. 142-168.

²⁴ See Duncan, O.D., "A Socioeconomic Index for All Occupations," in A.J. Reiss, Jr. (Ed.), *Occupations and Social Status* (New York: Free Press, 1981), pp. 139-161; Featherman, D.L., Jones, F.L., and Hauser, R.M., "Assumptions of Social Mobility Research in the U.S.: The Case of Occupational Status," *Social Science Research*, 4 (1985), pp. 329-360.

Each occupational category includes a variety of jobs with different levels of prestige. The socioeconomic indices are based on individual occupations, so that a certain range of index values includes occupations of similar prestige across different occupational areas.

The MSEI scores range from 13 to 89 for DoD fathers, and from 12 to 89 for CPS fathers. Figure 7.1 shows the distribution of MSEI scores for active duty, Reserve Component, and CPS fathers. In general, both Active and Reserve Component fathers are overrepresented in the occupations with an MSEI less than 50, and underrepresented in the occupations with an MSEI greater than 50. However, DoD fathers are underrepresented in the occupations in the lowest MSEI category.

The lines in Figure 7.1 are the active duty and reserve representation ratios for the MSEI ranges. That is, each line shows the ratio of the percentage of DoD fathers (either active duty or Reserve Component) in the range to the percentage of CPS fathers in the range. A representation ratio of greater than 1.0 for an MSEI category indicates a greater proportion of DoD parents in the category, compared to CPS parents, while a ratio of less than 1.0 indicates fewer DoD parents in the category, compared to CPS parents. The magnitude of the representation ratio indicates the extent to which the DoD and CPS distributions differ.

Figure 7.1. MSEI distribution for DoD and CPS fathers with DoD representation ratio.

The representation ratios for active duty and Reserve Component fathers are nearly identical; consequently, they will be described together. DoD fathers are substantially underrepresented in both the highest and lowest MSEI categories, with representation ratios of 0.5 and 0.4, respectively, for active duty fathers. In addition, the representation ratio is 0.5 for the range of MSEI from 51 to 55. Examination of the CPS data in this range showed that the large proportion of CPS fathers in this range have occupations in just two categories: managers and administrators, and supervisors and proprietors for sales occupations. These two occupational categories represent over 15 percent of CPS fathers, while they are only 8 percent of DoD fathers. The DoD representation ratio has a maximum value of 1.6 in the range MSEI between 36 and 40.

Mothers' TSEI scores range from 14 to 90 for both DoD and CPS mothers. As shown in Figure 7.2, differences between the DoD and CPS mothers are similar to those for the fathers; DoD mothers are generally overrepresented in occupations with lower TSEI values, and underrepresented in occupations with higher values. As was the case for fathers, the representation ratio is nearly the same for Active and Reserve Component mothers, with the exception of the highest TSEI category for which the representation ratio is 1.0 for active duty mothers and 0.4 for Reserve Component mothers. However, these ratios are based on a very small percentage of the sample, less than 0.5 percent, and consequently, do not represent an important difference.

Figure 7.2. TSEI distribution for DoD and CPS mothers with DoD representation ratio.

Two extreme values of the representation ratio deserve further analysis. Nearly twice the proportion of active duty mothers have occupations with a TSEI between 36 and 40 than CPS mothers (1.9 representation ratio). A closer examination of this difference indicated that it is due primarily to a single job category, general office supervisors. Nearly 3 percent of active duty mothers have this occupation, while fewer than 1 percent of CPS mothers do. In addition, a large proportion of CPS mothers receive a TSEI index in the range from 71 to 75. The high proportion of CPS mothers in this category is due primarily to two occupations, elementary school teacher and secondary school teacher, which together comprised over 5 percent of the CPS mothers' distribution. A similar percentage was not present among DoD mothers; consequently the DoD representation ratio for this range of TSEI was 0.3.

Although both DoD mothers and fathers are underrepresented in the upper half of the SEI scales, this range represents only about one-fourth of the general population. Figure 7.3 shows the representation of DoD parents from each quartile of the general population. As the quartiles divide CPS parents into equal fourths with regard to SEI, DoD parents also might be equally divided among the quartiles. Figure 7.3 agrees with the previous figures in showing that DoD parents are underrepresented in the highest quartile of CPS distribution. The deficit in the fourth quartile is compensated for by excesses in the other three quartiles. This difference reflects the underrepresentation of DoD parents in executive and professional occupations, which tend to have SEI values in this range. We expect that SEI differences between DoD and CPS parents would

Figure 7.3. DoD MSEI and TSEI distribution related to CPS distribution quartiles.

be moderated somewhat, but would still remain, if parents of officer accessions were included in the DoD sample.

In summary, enlisted accessions come from all SES levels. However, there is a tendency for accessions to come from families in the lower three-quarters of the status distribution. These differences are expressed in the occupations of the parents of accessions, as well as discrepancies in education and home ownership. No differences were discovered between active duty and Reserve Component accessions. Including officer accessions in the analysis would probably increase the representation of higher SES among military accessions, but would not eliminate differences between DoD and CPS parents.

Chapter 8

REPRESENTATION AND THE TOTAL FORCE

Is the military representative of the national population? After decades of study and continual disagreement regarding the answer, it may be appropriate to change the question. A better perspective from which to judge or at least view military personnel is by asking "Who is represented in the military?" Furthermore, when considering the issue of the sociodemographic composition of the military, it is important to keep all components in mind. Certainly, active duty enlisted members comprise the bulk of those in uniform but there is also a strong contingent of Selected Reservists and officers to consider.

FY 1994: A Summary

The snapshot for FY 1994 highlights some of the expected and unquestioned discrepancies between military and civilian personnel, such as that the military comprises a younger workforce and has relatively few women. At the same time, the report, if studied in its entirety, dispels some persistent myths and misperceptions regarding the characteristics and qualities of military personnel.

Selected Reservists not only round out units but at strengths of 998,000 enlisted and 140,000 officers they provide the military with strong ties to the civilian community. Furthermore, middle class citizen soldiers and the college educated are not absent but notably present. In fact, excluding officers, socioeconomic indices suggest that active duty and Selected Reserve recruits come from middle class America. Those in the top quarter of the distribution melded from parental income, education, and occupational prestige are not as likely to join the enlisted ranks but neither are the sons and daughters of the nation's poorest citizens overrepresented.

Among the 176,000 active duty enlisted accessions, 99 percent had a high school diploma or equivalent (5 percent had at least some college experience as well). Among the entire active duty enlisted force, 24 percent had college experience. Similarly, 99 percent of enlisted accessions to the Selected Reserves were high school graduates and 4 percent had some college. A higher percentage (14 percent) of all enlisted reservists had completed at least some college. FY 1994 active duty commissioned officers were overwhelmingly college graduates (only 2 percent of those newly commissioned and only 1 percent of the officer corps did not possess a Bachelor's degree). Reserve officer accessions and corps members had 85 percent and 87 percent, respectively, college graduates among their numbers. The education picture gets even brighter when advanced degrees and to-be-earned college degrees afforded by the military are considered.

Blacks are overrepresented in all enlisted components--active and reserve, accessions and total force. In FY 1994, their accession proportions were slightly (about 4 percentage points) above comparable civilian population figures. Influenced in great part by higher retention tendencies of Black military personnel, their representation among all members was considerably higher--nearly double the civilian proportions. Blacks have increased their representation among the officer components to the point of parity with the college-educated officer pool.

There is no egregious lack of balance between the geographic dispersion of the civilian population and military members. For example, when comparing the "representation ratios" of enlisted accessions to civilians within regions, the range is a high of 1.2 for the South to a low of .8 for the Northeast.

In addition to high school graduation rates, ability levels run higher in the military than in the civilian population. Among the laudable figures are that 72 percent of enlisted active duty FY 1994 accessions scored within the top half of the Armed Forces Qualification Test distribution. The average reading grade level of these accessions was also higher than that of the youth population.

In terms of marital status, accessions and newly commissioned officers were less likely than comparably aged civilians to be married. However, except in the case of women in the military, when not constrained to newcomers, military members generally were somewhat more likely to be married than their civilian counterparts. For example, whereas 55 percent of 18-44 year-old civilians had a spouse, 57 percent of Active Component enlisted members were married (including 11 percent who were partners in a dual-military marriage).

What is the emerging pattern? Some groups and characteristics are overrepresented in the military and some are underrepresented, but not necessarily "across the board." Any evaluation of the composition of the forces can certainly be influenced by the trait being scanned and the component being considered.

Though hardly a reflection of civilian population proportions, high ability levels among military personnel are applauded as a strength, as are negligible proportions of nongraduates. Minority representation is continually controversial and thus variously interpreted. High representation of Blacks among enlisted personnel is lamented both because it is influenced by relatively poor civilian economic prospects and because of the potential combat consequences or at least the burdens of service. On the other hand, there are somewhat inconsistent concerns that lower recruiting levels and tightened entry standards operating in a downsized military may cut back on Black representation; while higher quality may be welcome, reducing opportunities is a cause for concern. Within this light, of course, an increase in minority representation in the officer corps would be welcome. The age distribution of the military may not cause an eyebrow to be raised and the greater role for women is seen positively, but the corresponding growth in the proportion of married personnel and dual-service couples is viewed with some trepidation because of the links between such characteristics and military readiness and family well-being.

A More Complete Picture of Representation

The characteristics of military personnel have evolved over the years and they will continue to do so in the future. The future level of participation on the part of racial and ethnic minority is unclear. Though still more favorably disposed to enlist than Whites, Black enlistment propensity and representation levels are lower than in previous years. To the extent that a stepped-up deployment schedule and increased risks are the culprit, then the proportion of Black enlistments can be expected to decline or at least fail to turn around.

The issue of minority and particularly Black representation in the military is noteworthy and important but it is not the only characteristic to which policy makers need to attend. Among the other notable and crucial findings highlighted in this report are that quality has been good for some time, women are gaining ground, and families represent an increasing presence.

Inasmuch as the United States has come to rely on a Total Force of active duty *and* reserves, it is also time to monitor the characteristics of the totality of military personnel. Young, high aptitude, middle class, high school graduates and college-educated or college-bound youth with clear ties to the civilian community from which they are drawn are serving on active duty and in the reserves in the enlisted ranks and the officer corps. Women are becoming a more visible constituency as are spouses of military members. The progress of women in the military can be expected to continue. Gender-neutral recruiting in the Navy as of FY 1994, in addition to the Air Force's similar existing policy, will likely bolster their representation. Furthermore, the assignment prospects for women, once in uniform, will be brighter as the ground gained in FY 1994 in the number of positions open to women takes effect.

The data presented in the chapters above, covering officers and enlisted personnel within the active force and the selected reserves, while more inclusive than past statistics, are still incomplete. For example, the picture of socioeconomic status lacks officers, who might be expected to inch the indices upward. It might also prove informative to assess the socioeconomic levels of prior-service Reservists who comprise the bulk of Selected Reserve members. A description of their (and not their parents') status would provide some insight into the degree of economic motivation for Reserve affiliation.

Warrant officers were covered briefly this year and were shown to enhance the representation levels of Blacks among officers. Civilians are another important yet often neglected Defense contingent. In addition to civilian control over the military, over the years the role of civilians in the military environment has expanded. Though not yet included in the *Population Representation* report, their presence and contribution to Defense representation should indeed be noted.

Furthermore, to gauge appropriate representation in the present or the future, it is important to be mindful of the past. Longitudinal data depicting the characteristics of reserve as well as active duty personnel provide a better basis for evaluating the strengths and weaknesses in sociodemographic representation and formulating appropriate personnel policies and goals.

Clearly, military personnel are no longer overwhelmingly single young White men marching off to the "typical" war. Minorities, women, and men and women with family ties and responsibilities are called upon to deploy for various training and operational missions. And, as part of a leaner force in an unpredictable global environment, the pace or tempo is ever increasing. Defense must be responsible for and responsive to its increasingly diverse force.

Conclusion

It is important to keep in mind that the representation of distinct subgroups is interwoven. Members are not just male or female, White, Black, Hispanic, or Other, high- or low-quality, affluent, middle class, or disadvantaged, from the cities, suburbs, or rural areas throughout America, married or single. Rather, those in uniform and those hoping to be so suited comprise a constellation of factors. Furthermore, the military has numerous sectors and needs and is not limited to the active duty enlisted component. It is wise to be mindful not only that representation levels of one group characteristic will have effects on other member characteristics but that representation varies with the component in question.

In the final analysis, it is not equal representation but "selective" representation that most military personnel managers and commentators want. Claims that the military, and in particular today's smaller force, is inadequate because its personnel statistics do not reflect population proportions ignore the more urgent demands for quality. Even more fundamental, individual choice is and should be the predominant means of acquiring and retaining personnel.
